Printing History

The manual printing date and part number indicate its current edition. The printing date changes when a new edition is printed. Minor corrections which are made during normal reprints do not cause the date to change. New editions will incorporate all material updated since the previous edition. An updated page will have a revision date at the bottom of the page and a vertical bar in the margin opposite the change. The manual part number changes when extensive technical changes are incorporated.

July 1985...First Edition

What Version?

As of December 1982, the compatibility of system software is indicated by the revision number included in the software's name. The revision number has a digit to the left and right of a decimal point. The digit to the left of the decimal point indicates the "level" of the system. System software files are compatible with one another if they have matching "level" numbers. For example, a binary file (referred to as a "BIN") named "ABC4.3" would be compatible with BASIC 4.0 because they both have "4" as the leading digit. The digit to the right of the decimal point indicates the revision number of that particular piece of code. Thus, "XYZ4.1" would be an updated version of "XYZ4.0" and replaces the old version.

The language's version is displayed on the CRT at power-up. BASIC 4.0 gives the following message:

```
BASIC Ready 4.0
```

If a numeric version code (3.0 in the example) is not shown, then BASIC 1.0 is resident. Loading a BIN file with LOAD BIN produces a message similar to the following, where IO is the BIN file that is loaded:

```
BASIC IO 4.0      (c) Copyright HP 1985
```

Data Types

I/O path A combination of firmware and hardware that can be used for the transfer of data to and from a BASIC program. Associated with an I/O path is a unique data type that describes the I/O path. This association table uses about 200 bytes and is referenced when the I/O path name is used.

INTEGER A numeric data type stored internally in two bytes. Two's-complement representation is used, giving a range of -32 768 thru +32 767.

REAL A numeric data type that is stored internally in eight bytes using sign-and-magnitude binary representation. One bit is used for the number's sign, 11 bits for a biased exponent (bias = 1023), and 52 bits for a mantissa. On all values except zero, there is an implied "1." preceding the mantissa (this can be thought of as the 53rd bit). Approximated to four digits, the range of REAL numbers is:

-1.798 E+308 thru -2.225 E-308, 0, and
+2.225 E-308 thru +1.798 E+308.

If a numeric variable is not explicitly declared as an INTEGER, it is a REAL.

string A data type comprised of a contiguous series of characters. Each character in the string is stored in one byte using an extended ASCII character set. The first character in a string is in position 1. The maximum length of a string is 32 767 characters. The current length of a string can never exceed the dimensioned length.

If a string is not explicitly dimensioned, it is implicitly dimensioned to 18 characters. Each element in an implicitly dimensioned string array is dimensioned to 18 characters.

When a string is empty, it has a current length of zero and is called a "null string". All strings are null strings when they are declared.

Expression Evaluation

Operators

Dyadic Operator	Operation
+	REAL or INTEGER addition
-	REAL or INTEGER subtraction
*	REAL or INTEGER multiplication
/	REAL division
^	Exponentiation
&	String concatenation
DIV	Gives the integer quotient of a division
MOD	Gives the remainder of a division
MODULO	Gives the remainder of a division, similar to MOD
=	Comparison for equality
<>	Comparison for inequality
<	Comparison for less than
>	Comparison for greater than
<=	Comparison for less than or equal to
>=	Comparison for greater than or equal to
AND	Logical AND
OR	Logical inclusive OR
EXOR	Logical exclusive OR
Monadic Operator	Operation
-	Reverses the sign of an expression
+	Identity operator
NOT	Logical complement

Math Hierarchy

Operators of equal precedence are evaluated left-to-right.

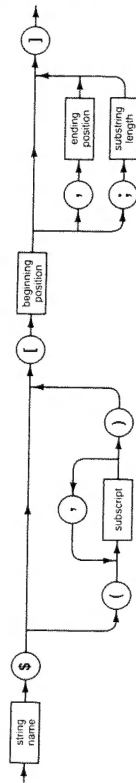

Precedence	Operator
High	Parentheses: (may be used to force any order of operations)
	Functions, user-defined and machine-resident
	Exponentiation
	Multiplication and division
	Plus and minus (monadic and dyadic)
	Relational operators
	NOT
Low	AND OR EXOR

String Hierarchy

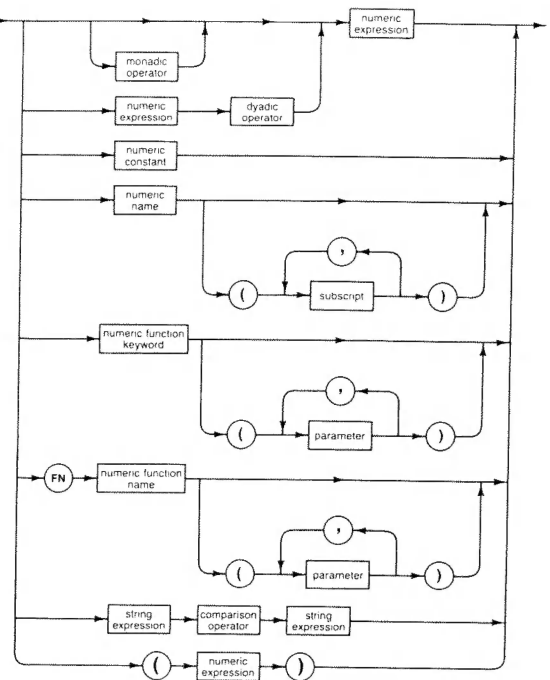

Precedence	Operator
High	Parentheses
	Substrings and functions
Low	Concatenation

Substrings

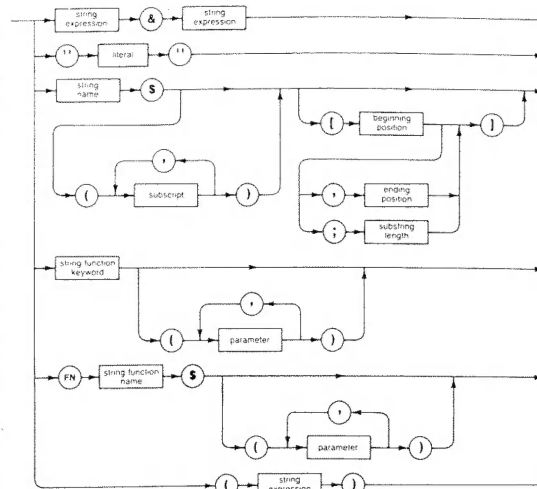

The beginning position must be at least one and no greater than the current length plus one. The ending position must be no less than the beginning position minus one and no greater than the dimensioned length of the string. The maximum substring length must be at least zero and no greater than one plus the dimensioned length of the string minus the beginning position. (See drawing.)

Numeric Expression

String Expressions

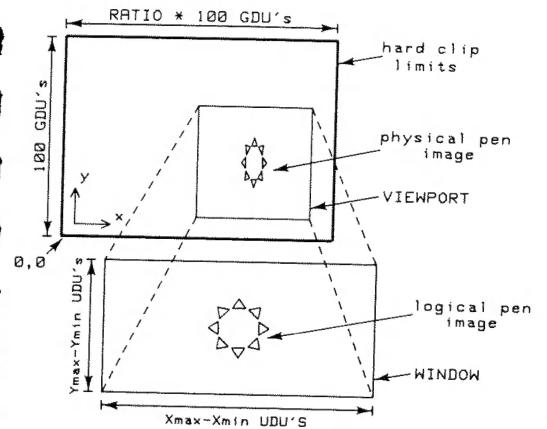

Simplified Graphics Mapping

VIEWPORT, specified in Graphics Display Units (GDU), defines the area of the screen into which a coordinate system defined by **WINDOW** or **SHOW** is mapped.

WINDOW specifies a coordinate system, measured in User Defined Units (UDU), that is mapped into the area defined by **VIEWPORT**. The X and Y bounds specified in a **WINDOW** statement are placed exactly on the **VIEWPORT** bounds, and the aspect ratio of the coordinate system is adjusted accordingly (anisotropic view).

SHOW is similar to **WINDOW**, except the range of the specified coordinate system is adjusted by the computer to maintain equal-sized UDU's on both axes (isotropic view).

Simplified Color Model

PLOTTER IS...:COLOR MAP enables the color map mode. The color map must be enabled to use the **SET PEN** statement.

PEN selects a color to be used for subsequent lines, characters, and edges.

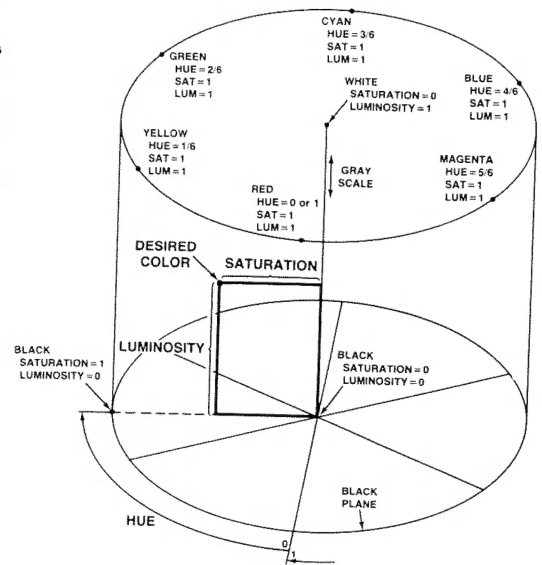

SET PEN defines the color displayed on the CRT when a given pen selector is used. Secondary keywords **COLOR** and **INTENSITY** select the color model to be used (see below).

AREA defines and/or selects the color to be used for filling polygons, array plots, and rectangles. **COLOR** and **INTENSITY** select the color model to be used (see below). Secondary keyword **PEN** selects a pen to be used, instead of dithered colors.

...**COLOR** selects the HSL color model. The HSL models uses coordinates in a cylindrical color space, with the axes being *Hue*, *Saturation*, and *Luminosity*. See the drawing on the next page.

...**INTENSITY** selects the RGB color model. The RGB model uses coordinates in a cartesian color space, with the axes being *Red*, *Green*, and *Blue*.

HSL Color Space

Glossary

array A structured data type that can be of type REAL, INTEGER, or string. Arrays are created with the DIM, REAL, INTEGER, ALLOCATE, or COM statements. Arrays have 1 to 6 dimensions; each dimension is allowed 32 767 elements. The lower and upper bounds for each dimension must fall in the range -32 767 (-32 768 for ALLOCATE) thru +32 767, and the lower bound must not exceed the upper bound. The default lower bound is the OPTION BASE value; the OPTION BASE statement can be used to specify 0 or 1 as the default lower bound. The default OPTION BASE at power-on or SCRATCH A is zero.

Each element in a string array is a string whose maximum length is specified in the declaring statement. The declared length of a string must be in the range 1 thru 32 767.

To specify an entire array, the characters (*) are placed after the array name. To specify a single element of an array, subscripts are placed in parentheses after the array name. Each subscript must not be less than the lower bound or greater than the upper bound of the corresponding dimension.

If an array is not explicitly dimensioned, it is implicitly given the number of dimensions used in its first occurrence, with an upper bound of 10. Undeclared strings have a default length of 18.

command A statement that is executed from the keyboard input line. (Also see "statement".)

context An instance of an environment. A context consists of a specific instance of all data types which may be accessed by a program at a specific point in its execution.

device selector A numeric expression used to specify the source or destination of an I/O operation. A device selector can be either an interface select code or a combination of an interface select code and a primary address. To construct a device selector with a primary address, multiply the interface select code by 100 and add the primary address.

Secondary addresses may be appended after a primary address by multiplying the device selector by 100 and adding the address. This may be repeated up to 6 times, adding a new secondary address each time. A device selector, once rounded, can contain a maximum of 15 digits.

When a device selector contains an odd number of digits, the leftmost digit is the interface select code. For an even number of digits, the leftmost two digits are the interface select code. For example, 70502 selects interface 7, primary address 05, and secondary address 02. Device selector 1516 selects interface 15 and primary address 16.

file name A file name consists of one to ten characters. Valid file names can contain uppercase letters, lowercase letters, numerals, the underscore (_), and CHR\$(161) thru CHR\$(254). LIF-compatible file names can contain only uppercase letters and numerals. The first character in a LIF-compatible file name must be a letter.

function A procedural call that returns a value. The call can be to a user-defined-function subprogram (such as FNInvert) or a machine-resident function (such as COS or EXP). The value returned by the function is used in place of the function call when evaluating the expression containing the function call. A function is considered numeric if it returns a numeric quantity.

interface select code A numeric expression that selects an interface for an I/O operation. Interface select codes 1 thru 7 are reserved for internal interfaces. Interface select codes 8 thru 31 are used for external interfaces. The internal HP-IB interface with select code 7 can be specified in statements that are restricted to external interfaces. (Also see "device selector".)

msus This is the acronym for "mass storage unit specifier". It is a string expression that specifies a device to be used for mass storage operations.

name A name consists of one to fifteen characters. The first character must be an uppercase ASCII letter or one of the characters from CHR\$(161) thru CHR\$(254). The remaining characters, if any, can be lowercase ASCII letters, numerals, the underscore (_), or CHR\$(161) thru CHR\$(254). Names may be typed using any combination of uppercase and lowercase letters, unless the name uses the same letters as a keyword. Conflicts with keywords can be resolved by mixing the letter case in the name. (Also see "file name".)

primary address A numeric expression in the range of 0 thru 31 that specifies an individual device on an interface which is capable of servicing more than one device. The HP-IB interface can service multiple devices. (Also see "device selector".)

program line A statement that is preceded by a line number (and an optional line label) and stored into a program. (Also see "statement".)

recursive See the *BASIC Language Reference*.

secondary address A device-dependent command sent on HP-IB. It can be interpreted as a secondary address for the extended talker/listener functions or as part of a command sequence. (Also see "device selector".)

statement A keyword combined with any additional items that are allowed or required with that keyword. If a statement is placed after a line number and stored, it becomes a program line. If a statement is executed from the keyboard input line, it is called a command.

subprogram Can be either a SUB subprogram or a user-defined function subprogram (DEF FN). The first line in a SUB subprogram is a SUB statement. The last line in a SUB subprogram (except for comments) is a SUBEND statement. The first line in a function subprogram is a DEF FN statement. The last line in a function (except for comments) is an FNEND statement. Subprograms must follow the END statement of the main program.

SUB subprograms are invoked by CALL. Function subprograms are invoked by an FN function occurring in an expression. A function subprogram returns a value that replaces the occurrence of the FN function when the expression is evaluated. Either type of subprogram may alter the values of parameters passed by reference or variables in COM.

Invoking a subprogram establishes a new context. The new context remains in existence until the subprogram is properly exited or program execution is stopped. Subprograms can be recursive.

subroutine A program segment accessed by a GOSUB statement and ended with a RETURN statement.

Keywords

A

ABORT

Requires IO

This statement ceases HP-IB activity. When system controller but not active controller, ABORT causes the computer to assume active control.

```
ABORT 7
ABORT Isc
IF Stop_code THEN ABORT @Source
```

ABORTIO

Requires TRANS

This statement terminates a TRANSFER which is taking place through an I/O path. The I/O path named in the statement must be assigned to a file or device, not a buffer.

```
ABORTIO @Isc
IF Stop_flag THEN ABORTIO @Device
```

ABS

This function returns the absolute value of its argument.

```
Magnitude=ABS(Vector)
PRINT "Value =" ;ABS(X1)
```

ACS

This function returns the principal value of the angle which has a cosine equal to the argument. This is the Arccosine function.

```
Angle=ACS(Cosine)
PRINT "Angle =" ;ACS(X1)
```

ALLOCATE

This statement dynamically allocates memory for arrays and string variables during program execution. See DEALLOCATE.

```
ALLOCATE Temp(Low:High)
ALLOCATE INTEGER Array(Index,2,8)
ALLOCATE R$(LEN(A$)+1)
ALLOCATE Text$(Lines)(80)
```

ALPHA

Requires GRAPH

This statement turns the alphanumeric display on or off. The statement has no effect on the contents of the alpha memory, it just controls whether it is displayed or not.

```
ALPHA ON
IF Graph THEN ALPHA OFF
```

AND

This operator returns a 1 or a 0 based upon the logical AND of the arguments.

```
IF Flag AND Test2 THEN Process
Final=Initial AND Valid
```

AREA

Requires GRAPHX

This statement defines or selects an area fill color. See SET PEN for a color table.

```
AREA COLOR Hue,Saturation,Luminosity
AREA INTENSITY Red(I),Green(I),Blue(I)
AREA PEN 3
```

ASCII

See CREATE ASCII and LEXICAL ORDER IS.

ASN

This function returns the principal value of the angle which has a sine equal to the argument. This is the Arcsine function.

```
Angle=ASN(Sine)
PRINT "Angle =" ;ASN(X1)
```

ASSIGN

This statement assigns an I/O path name and attributes to a device, group of devices, a mass storage file, or a buffer. Without TRANS or IO, the only attribute allowed is FORMAT.

```
ASSIGN @File TO Name$&Msus$
ASSIGN @Source TO Isc;FORMAT OFF
ASSIGN @Listeners TO 711,712,715
ASSIGN @Change;FORMAT ON
ASSIGN @Close TO *
```

Requires TRANS

```
ASSIGN @Buffer TO BUFFER String$
ASSIGN @Buf TO BUFFER Array(*)
ASSIGN @Buff2 TO BUFFER [48000]
```

Requires IO

```
ASSIGN @Path TO File$;RETURN Outcome
ASSIGN @Port TO Gpio;WORD
ASSIGN @Dest TO Rs_232;EOL My$ DELAY ,1,
  CONVERT OUT BY INDEX Out$,PARITY ODD
ASSIGN @Path;BYTE
```

ATN

This function returns the principal value of the angle which has a tangent equal to the argument. This is the Arctangent function.

```
Angle=ATN(Tangent)
PRINT "Angle =" ;ATN(X1)
```

AXES

Requires GRAPH

This statement draws a pair of axes, with optional, equally-spaced tick marks.

```
AXES 10,10
AXES X,Y,Midx,Midy,Maxx/10,Maxy/10
AXES Xspace,Yspace,Xlock,Ylock,Xmajor,
  Ymajor,Majorsize
```

B

BASE

Requires MAT

This function returns the lower subscript bound of a dimension of an array.

```
Lowerbound=BASE(Array,Dimension)
Upperbound(2)=BASE(A,2)+SIZE(A,2)-1
```

BDAT

See CREATE BDAT.

BEEP

This statement produces one of 63 audible tones.

```
BEEP
BEEP Freq,Duration
BEEP 81.38*Tone,Seconds
```

BIN

See LIST, LOAD, and SCRATCH.

BINAND

This function returns the value of a bit-by-bit logical-and of its arguments.

```
Low_4_bits=BINAND(Byte,15)
IF BINAND(Stat,3) THEN Bit_set
```

BINCMP

This function returns the value of the bit-by-bit complement of its argument.

```
True=BINCMP(Inverse)
PRINT X,BINCMPI(X)
```

BINEOR

This function returns the value of a bit-by-bit exclusive-or of its arguments.

```
Toggle=BINEOR(Toggle,1)
True_byte=BINEOR(Inverse_byte,255)
```

BINIOR

This function returns the value of a bit-by-bit inclusive-or of its arguments.

```
Bits_set=BINIOR(Value1,Value2)
Top_bit_on=BINIOR(All_bits,2^15)
```

BIT

This function returns a 1 or 0 representing the value of the specified bit of its argument. The least-significant bit is bit 0.

```
Flag=BIT(Info,0)
IF BIT(Word,Test) THEN PRINT "Bit #";
    Test;"is set"
```

BREAK

Requires IO

This statement directs a serial interface to send a break sequence.

```
BREAK 9
BREAK @Datacomm
```

BUFFER

See ASSIGN, COM, DEF FN, DIM, INTEGER, REAL, and SUB.

BYTE

See ASSIGN.

C

CALL

This statement transfers program execution to the specified SUB (or CSUB) subprogram and may pass parameters to the subprogram.

```
CALL Process(Reference,(Value),@Path)
CALL Transform(Array(*))
Parse(String$(Line)[B],Pointer+Offset)
ON END @File CALL Sortnumbers
IF Flag THEN CALL Special
```

CASE

See SELECT...CASE.

CAT

This statement lists the contents of the mass storage media's directory. With MS, portions of the directory may be selected, the information may be sent to a string array, or information about a PROG file may be requested.

```
CAT
CAT TO #701
CAT ":INTERNAL,4,1"
CAT Msus$ TO #12
```

Requires MS

```
CAT TO String$(*)!NO HEADER
CAT Prog_file_name$
CAT!SELECT "C",SKIP First,COUNT Retn_var
```

Requires SRM and MS

The following use of the CAT statement lists all the passwords for a file if a MANAGER password is supplied. Works only for SRM files.

```
CAT "MyFile<MgrProtectCode>"!PROTECT
CAT "MyFile<MgrPC>" TO Cat$(*)!PROTECT
CAT "MyFile<MgrPC>" TO #701!PROTECT
```

CHANGE

Requires PDEV

This program editing command allows search-and-replace operations.

```
CHANGE "Old Text" TO "New Text"  
CHANGE "Row" TO "Column" IN 2560,3310  
CHANGE "November" TO "December" ALL
```

CHECKREAD

Requires MS

This statement enables or disables optional read-after-write verification of data sent to mass storage media.

```
CHECKREAD ON  
CHECKREAD OFF
```

CHR\$

This function converts a numeric value into an ASCII character. The low-order byte of the 16-bit integer representation of the argument is used; the high-order byte is ignored. A table of ASCII characters and their decimal equivalent values is in the back of this book.

```
Lowercase$=CHR$(NUM(Uppercase$)+32)  
A$[Marker;1]=CHR$(Digit+128)  
Esc$=CHR$(27)
```

CLEAR

Requires IO

This statement allows the active controller to put HP-IB devices into a device-dependent state.

```
CLEAR 7  
CLEAR Voltmeter  
CLEAR @Source
```

CLIP

Requires GRAPH

This statement redefines the soft clip area, enables, or disables the soft clip limits.

```
CLIP Left,Right,Bottom,Top  
CLIP ON  
CLIP OFF
```

CMD

See SEND.

COLOR

See AREA and SET PEN. For COLOR MAP, see PLOTTER IS.

COM

This statement dimensions and reserves memory for variables in a special "common" memory area so more than one program context can access the variables.

```
COM X,Y,Z  
COM /Block/ Text$,@Path,INTEGER Points(*)  
COM INTEGER I,J,REAL Array(-128:127)  
COM Buffer$(1024) BUFFER
```

CONT

This command resumes execution of a paused program at the specified line. If no line is specified, execution resumes at the line pointed to by the program counter.

```
CONT  
CONT 550  
CONT Sort
```

CONTROL

This statement sends control information to an interface or to the internal table associated with an I/O path name.

```
CONTROL @Rand_file,7;File_length  
CONTROL 1;Row,Column  
CONTROL Interface,Register;Value
```

CONVERT

See ASSIGN.

COPY

This statement allows copying of individual files or entire discs. When an entire disc is copied, **all** old files on the destination disc are destroyed.

```
COPY Old_file$ TO New_file$  
COPY "MY_FILE" TO "TEMP<pc>:HP9895,700,1"  
COPY ":INTERNAL" TO ":INTERNAL,4,1"  
COPY Int_disc$ TO Ext_disc$
```

COPYLINES

Requires PDEV

This program editing command copies contiguous program lines from one location to another. If only one line identifier is specified, only that line is copied.

```
COPYLINES 1200 TO 3255
COPYLINES 10,120 TO 500
COPYLINES Label1,Label2 TO Label3
```

COS

This function returns the cosine of the argument.

```
Cosine=COS(Angle)
PRINT COS(X+45)
```

COUNT

See CAT and TRANSFER.

CREATE ASCII

This statement creates an ASCII file of specified length on the mass storage media.

```
CREATE ASCII "TEXT",100
CREATE ASCII Name$&Msus$,Sectors
```

CREATE BDAT

This statement creates a BDAT file of specified length on the mass storage media.

```
CREATE BDAT "George",48
CREATE BDAT "ABC<PC>",Records,Record_len
CREATE BDAT Name$&Msus$,Bytes,1
```

CREATE DIR

Requires SRM

This statement creates a directory file in either the current working directory or the specified remote directory of a Shared Resource mass storage device.

```
CREATE DIR "NEW_DIR_1.1"
CREATE DIR "/USERS/SMITH/Job5"
CREATE DIR "../brother"
CREATE DIR "../brother/nephew"
```

CRT

This function returns 1, the device selector of the CRT.

```
PRINTER IS CRT
ENTER CRT:Array$(*)
```

CSIZE

Requires GRAPH

This statement sets the size and aspect (width:height) ratio of the character cell used by the LABEL statement.

```
CSIZE 10
CSIZE 5,0.6
CSIZE Size,Width/Height
```

CSUB

CSUB statements are created in Pascal using a special CSUB preparation utility. When viewed in BASIC's edit mode, they look like SUB statements. CSUBs cannot be edited from BASIC.

CSUM

See MAT.

CYCLE

See OFF CYCLE and ON CYCLE.

D

DATA

This statement contains data which can be read by READ statements.

```
DATA 1,1.414,1.732,2
DATA word1,word2,word3
DATA"ex-Point(!)","quote("")","comma(,)"
```

DATE

Requires CLOCK

This function converts a formatted date string into a numeric value in seconds.

```
PRINT DATE("30 MAY 1983")
Days=(DATE(Day1$)-DATE(Day2$)) DIV 86400
```

DATE\$

Requires CLOCK

This function formats a number of seconds into a string representing the formatted date (DD MMM YYYY).

```
PRINT DATE$(TIMEDATE)
Day1$=DATE$(Event1)
```

DEALLOCATE

This statement deallocates memory space reserved by the ALLOCATE statement.

```
DEALLOCATE A$,B$,C$
DEALLOCATE Text$(*)
DEALLOCATE Array(*)
```

DEF FN

This statement indicates the beginning of a function subprogram. It also indicates whether the function is string or numeric and defines the formal parameter list.

```
980 END
990 !
1000 DEF FNNew$(String$)
    .
    .
    .
1120 RETURN R$
1130 FNEND

DEF FNForm(@Ptr,INTEGER A(*) BUFFER,
    OPTIONAL Text$)

DEF FNExtract(Buf$ BUFFER,Pointer)
```

DEG

This statement selects degrees as the unit of measure for expressing angles. Radians are assumed unless a DEG statement is executed.

DEG

DEL

This command deletes program lines. If only one line identifier is specified, only that line is deleted.

```
DEL 15
DEL Start,Last
DEL Sort,32000
```

DELAY

See ASSIGN, OFF DELAY, ON DELAY, PRINTALL IS, and PRINTER IS.

DELIM

See TRANSFER.

DELSUB

This statement deletes one or more SUB (or CSUB) subprograms or user-defined function subprograms from memory. Comments are associated with the subprogram above them.

```
DELSUB FNTrim$
DELSUB Process TO END
DELSUB Special1,Special3
```

DET

Requires MAT

This function returns the determinant of a matrix.

```
Last_det=DET
PRINT DET(Matrix)
```

DIGITIZE

Requires GRAPHX

This statement inputs the X and Y coordinates of a digitized point from the locator specified by GRAPHICS INPUT IS.

```
DIGITIZE Xpos,Ypos,Status$  
IF Flag THEN DIGITIZE X,Y
```

DIM

This statement dimensions and reserves memory for REAL numeric arrays, strings and string arrays.

```
DIM String$(100),Name$(12)(32)  
DIM Param(48,B,B,2,2,2)  
DIM Array(-128:127,16)  
DIM Buff$(512) BUFFER,Array(500) BUFFER
```

DISABLE

This statement disables all event-initiated branches currently defined, except ON END, ON ERROR, and ON TIMEOUT.

```
DISABLE
```

DISABLE INTR

Requires IO

This statement disables interrupts from an interface by turning off the interrupt-generating mechanism on the interface.

```
DISABLE INTR 7  
DISABLE INTR Iso
```

DISP

This statement causes the display items to be sent to the display line on the CRT. See IMAGE for specifier descriptions.

```
DISP Prompt$;  
DISP TAB(5),First,TAB(20),Second  
DISP  
DISP Name$,Id;Code  
DISP USING Form3;Item(1),Item(2)  
DISP USING "52.DD";Money
```

DIV

This operator returns the integer portion of the quotient of the dividend and the divisor.

```
Quotient=Dividend DIV Divisor  
PRINT "Hours =" ;Minutes DIV 60
```

DOT

Requires MAT

This function returns the inner (dot) product of two numeric vectors.

```
Res=DOT(Vec1,Vec2)  
PRINT DOT(A,B)
```

DRAW

Requires GRAPH

This statement draws a line from the pen's current position to the specified X and Y coordinate position using the current line type and pen number.

```
DRAW 10,90  
DRAW Next_x,Next_y
```

DROUND

This function rounds a numeric expression to the specified number of digits. If the specified number of digits is greater than 15, no rounding takes place. If the number of digits specified is less than 1, zero is returned.

```
Test_real=DROUND(True_real,12)  
PRINT "Approx. Volts =" ;DROUND(Volts,3)
```

DUMP

This statement copies the contents of the alphanumeric display to a printing device. With GRAPH, the statement copies the contents of the graphics display to a printing device.

```
DUMP ALPHA  
DUMP ALPHA #701
```

Requires GRAPH

```
DUMP GRAPHICS #Device  
DUMP GRAPHICS Color_source  
DUMP GRAPHICS 28 TO #702
```

DUMP DEVICE IS

Requires GRAPH

This statement specifies which device receives the data when either DUMP ALPHA or DUMP GRAPHICS is executed without a device selector. Specifying EXPANDED results in graphics dumps that are 2× on each axis and rotated 90°. Device 701 is assumed unless a DUMP DEVICE IS statement is executed.

```
DUMP DEVICE IS 721
DUMP DEVICE IS Printer,EXPANDED
```

DVAL

This function converts a binary, octal, decimal, or hexadecimal character representation into a REAL whole number.

```
Number=DVAL(String$,Radix)
PRINT DVAL("FF5900",16)
```

DVAL\$

This function converts a numeric quantity into a character string representing a binary, octal, decimal, or hexadecimal base.

```
String$=DVAL$(Number,Radix)
PRINT DVAL$(Count MOD 256,2)
```

E

ECHO

See SET ECHO.

EDGE

See IPLOT, PLOT, POLYGON, RECTANGLE, RPLOT, and SYMBOL.

EDIT

This command allows you to enter a new program or edit a program already in memory. Refer to the *BASIC Programming Techniques* manual. With KBD, typing-aid keys can be edited.

```
EDIT
EDIT Label2
EDIT 1000,5
```

Requires KBD

EDIT KEY 5

ELSE

See IF...THEN.

ENABLE

This statement re-enables all event-initiated branches which were suspended by DISABLE.

ENABLE

ENABLE INTR

Requires IO

This statement enables the specified interface to generate an interrupt which can cause event-initiated branches.

```
ENABLE INTR 7
ENABLE INTR IsciMask
```

END

This **non-optional** statement marks the end of the main program. Subprograms (if any) follow the END statement.

END

END IF

See IF...THEN.

END LOOP

See LOOP.

END SELECT

See SELECT...CASE.

END WHILE

See WHILE.

ENTER

This statement is used to input data from a specified source and assign the values entered to variables. See IMAGE for specifier descriptions.

```
ENTER 705;Number,String$
ENTER Device;X;Y;Z
ENTER Command$;Parameter
ENTER @File;Array(*)
ENTER @Random;Record USING 20;Text$(Line)
ENTER @Source USING Fmt5;B(1);B(2);B(3)
ENTER 12 USING "#,6A";A$[2;6]
```

EOL

See ASSIGN, PRINTALL IS, and PRINTER IS.

EOR

See OFF EOR, ON EOR, and TRANSFER.

EOT

See OFF EOT and ON EOT.

ERRDS

This function returns the device selector of the I/O resource involved in the most recent I/O error.

```
IF ERRDS=701 THEN GOSUB Print_error
IF ERRN=163 THEN Missing=ERRDS
```

ERRL

This function returns a value of 1 if the most recent error occurred in the specified line. Otherwise, a value of 0 is returned. The specified line must be in same context as the ERRL function.

```
IF ERRL(220) THEN Parse_error
IF NOT ERRL(Parameters) THEN Other
```

ERRM\$

This function returns the text of the error message associated with the most recent program execution error.

```
PRINT ERRM$
Em$=ERRM$
ENTER Em$;Error_num;Error_line
```

ERRN

This function returns the number of the most recent program execution error. If no error has occurred, a value of 0 is returned.

```
IF ERRN=80 THEN Disc_out
DISP "Error Number = ";ERRN
```

ERROR

See OFF ERROR and ON ERROR.

EXIT IF

See LOOP.

EXOR

This operator returns a 1 or a 0 based on the logical exclusive OR of its arguments.

```
Ok=First_Pass EXOR Old_data
IF A EXOR Flag THEN Exit
```

EXP

This function raises e to the power of the argument. Internally, Napierian $e \approx 2.718\ 281\ 828\ 459\ 05$.

```
Y=EXP(-X^2/2)
PRINT "e to the";Z;"=";EXP(Z)
```

EXPANDED

See DUMP DEVICE IS.

F

FILL

See IPLOT, PLOT, POLYGON, RECTANGLE, RPLT, and SYMBOL.

FIND

Requires PDEV

This program editing command allows searching for specified text.

```
FIND "SUB Printer"
FIND "Cost=" IN 1550
FIND "Target" IN Label1,Label2
```

FN

This keyword transfers program execution to the specified user-defined function and may pass items to the function. The value returned by the function is used in place of the function call when evaluating the statement containing the function call. See DEF FN.

```
PRINT X:FNChange(X)
Final$=FNStrip$(First$)
Parameter=FNProcess(Reference,(Value),@Path)
R=FNTrans(Item(Start+Offset),LookUp(*))
```

FNEND

The last statement of a function subprogram. Must never be executed; control actually transferred back to calling content by a RETURN <value> statement.

FNEND

FOR...NEXT

This construct defines a loop which is repeated until the loop counter passes a specified value.

```
100 FOR I=4 TO 0 STEP -.1
110   PRINT I:SQR(I)
120 NEXT I

1220 INTEGER Point
1230 FOR Point=1 TO LEN(A$)
1240   CALL Convert(A$(Point;1))
1250 NEXT Point
```

FORMAT

See ASSIGN.

FRACT

This function returns the "fractional part" of its argument. For all X , $X = \text{INT}(X) + \text{FRACT}(X)$.

```
PRINT FRACT(17/3)
Right_Part=FRACT(Both_Parts)
```

FRAME

Requires GRAPH

This statement draws a frame around the current clipping area using the current pen number and line type. After drawing the frame, the current pen position coincides with the lower left corner of the frame, and the pen is down.

FRAME

FRENCH

See LEXICAL ORDER IS.

G

GCLEAR

Requires GRAPH

This statement clears the graphics display or sends a command to an external plotter to advance the paper.

GCLEAR

GERMAN

See LEXICAL ORDER IS.

GESCAPE

Requires GRAPHX

This statement is used for communicating device-dependent graphics information. The type, size, and shape of the arrays must be appropriate for the requested operation.

```
GESCAPE Device,Operation;Return_array(*)
GESCAPE 28,5
GESCAPE 3,2;Color_map(*)
GESCAPE Ds,Op,Send_array(*);Receive(*)
```

Operation Selector	Summary of Request
1	Number of color-map entries
2	Color map values
3	Hard clip values
4	Normal drawing mode
5	Alternate drawing mode
6	Return graphics masks
7	Set graphics masks
20	Set tablet hard clip limits
21	Get tablet hard clip limits
22	Get hard clip limits for all tablets

GET

This statement reads the specified ASCII file and attempts to store the strings into memory as program lines. If specified, program lines are renumbered to the first line identifier and run at the second line identifier. Also see LOAD.

```
GET "George"
GET Name$&Msus$,New_Process
GET Next_prog$,180,10
```

GINIT

Requires GRAPH

This statement establishes a set of default values for system variables affecting graphics operations.

GINIT

GLOAD

Requires GRAPH

This statement loads the contents of an INTEGER array into the graphics frame buffer. Also see GSTORE.

```
GLOAD Picture(*)
IF Flag THEN GLOAD Array(*)
GLOAD 28,H*98627(*)
```

GOSUB

This statement transfers program execution to the subroutine at the specified line. The specified line must be in the current context. The current program line is remembered in anticipation of returning (see RETURN).

```
GOSUB 120
IF Numbers THEN GOSUB Process
```

GOTO

This statement transfers program execution to the specified line. The specified line must be in the current context.

```
GOTO 550
GOTO Loop_start
IF Full THEN Exit
```

GRAPHICS

Requires GRAPH

This statement turns the graphics display on or off. The statement has no effect on the contents of the graphics memory, it just controls whether it is displayed or not.

```
GRAPHICS ON
IF Flag THEN GRAPHICS OFF
```

GRAPHICS INPUT IS

Requires GRAPHX

This statement defines the device to be used for subsequent DIGITIZE and READ LOCATOR statements. The default graphics input device is GRAPHICS INPUT IS KBD,"KBD".

```
GRAPHICS INPUT IS KBD,"KBD"  
GRAPHICS INPUT IS KBD,"ARROW KEYS"  
GRAPHICS INPUT IS 706,"HPGL"  
GRAPHICS INPUT IS Ds,HP$  
GRAPHICS INPUT IS KBD,"TABLET"
```

GRID

Requires GRAPH

This statement draws a full grid pattern. The pen is left at the intersection of the X and Y axes.

```
GRID 10,10  
GRID Xspace,Yspace,XlocY,YlocX,Xcount,  
Ycount,Major_size
```

GSTORE

Requires GRAPH

This statement stores the contents of the graphics frame buffer into an INTEGER array. See GLOAD.

```
GSTORE Picture(*)  
IF Final THEN GSTORE A(*)  
GSTORE 28,HP98627(*)
```

IDN

See MAT.

IDRAW

Requires GRAPH

This statement draws a line from the current pen position to a position calculated by adding the X and Y displacements to the current pen position.

```
IDRAW X+50,0  
IDRAW Delta_x,Delta_y
```

IF...THEN

This statement provides conditional branching.

```
150 IF Flag THEN Next_file  
160 IF Pointer<1 THEN Pointer=1  
  
580 IF First_pass THEN  
590   Flag=0  
600   INPUT "Command?";Cmd$  
610   IF LEN(Cmd$) THEN GDSUB Parse  
620 END IF  
  
1000 IF X<0 THEN  
1010   BEEP  
1020   DISP "Improper Argument"  
1030 ELSE  
1040   Root=SQR(X)  
1050 END IF
```

IMAGE

This statement provides image specifiers for the formatting of data which is entered or output with various statements. These specifiers can also be included after a USING clause in statements supporting that syntax.

```
IMAGE 4Z,DD,3X,K,/  
IMAGE "Result = ",SDDDE,3(XX,ZZ)  
IMAGE #,B
```

Effects of the image specifiers on an ENTER statement are shown in the following table.

Specifier	Meaning
K	Freefield Entry. Numeric: Entered characters are sent to number builder. Leading non-numeric characters are ignored. All blanks are ignored. Trailing non-numeric characters and characters sent with EOI true are delimiters. Numeric characters include digits, decimal point, +, -, e, and E, when their order is meaningful. String: Entered characters are placed in the string. A carriage-return not immediately followed by a line-feed is entered into the string. Entry to a string terminates on CR/LF. LF, a character received with EOI true, or when the dimensioned length of the string is reached.
-K	Like K except that LF is entered into a string, and thus CR/LF and LF do not terminate the entry.
H	Like K, except that the European number format is used. Thus, comma is the radix indicator and period is a numeric item terminator. (Requires IO.)
-H	Same as -K for strings; same as H for numbers. (Requires IO.)
S	Same action as D.
M	Same action as D.
D	Demands a character. Non-nums are accepted to fill the character count. Blanks are ignored; other non-nums are delimiters.
Z	Same action as D.
*	Same action as D. (Requires IO.)

Specifier	Meaning
.	Same action as D.
R	Like D, R demands a character. When R is used in a numeric image, the number builder uses the European number format. See the H specifier. (Requires IO.)
E	Same action as 4D.
ESZ	Same action as 3D.
ESZZ	Same action as 4D.
ESZZZ	Same action as 5D.
A	Demands a string character. Any character received is placed in the string.
X	Skips a character.
literal	Skips one character for each character in the literal.
B	Demands one byte. The byte becomes a numeric quantity.
W	Demands one word, which is interpreted as a 16-bit, two's-complement integer. The first byte entered on an 8-bit interface is the most-significant byte. The word is always entered in a single operation on a 16-bit interface. Files, string variables, and buffers are treated as 8-bit sources. Pad bytes are entered if necessary to achieve word-boundary alignment.
Y	Like W, except that pad bytes are not entered. Does not override a BYTE attribute used with a 16-bit interface. (Requires IO.)
#	Statement is terminated when the last ENTER item is terminated. EOI and line-feed are item terminators, and early termination is not allowed.
%	Same as # except EOI is a statement terminator. Early termination is allowed if the current item is satisfied.

Specifier	Meaning
+	Specifies that an END indication is required with the last character of the last item to terminate the ENTER statement. Line-feeds are not statement terminators. (Requires IO.)
-	Specifies that a line-feed terminator is required as the last character of the last item to terminate the ENTER statement. EOI is ignored, and other END indications cause an error. (Requires IO.)
/	Demands a new field; skips all characters to the next line-feed. EOI is ignored.
L	Ignored for ENTER.
@	Ignored for ENTER.

Effects of the image specifiers on a DISP, LABEL, OUTPUT, or PRINT statement are shown in the following table.

Specifier	Meaning
K	Compact field. Outputs a number or string in standard form with no leading or trailing blanks.
-K	Same as K.
H	Similar to K, except the number is output using the European number format. (Requires IO.)
-H	Same as H. (Requires IO.)
S	Outputs the number's sign (+ or -).
M	Outputs the number's sign if negative, a blank if positive.
D	Outputs one digit character. A leading zero is replaced by a blank. If the number is negative and no sign image is specified, the minus sign will occupy a leading digit position. If a sign is output, it will "float" to the left of the left-most digit.

Specifier	Meaning
Z	Same as D, except that leading zeros are output.
*	Like D, except that asterisks are output instead of leading zeros. (Requires IO.)
.	Outputs a decimal point radix indicator.
R	Outputs a comma radix indicator. (Requires IO.)
E	Same as ESZZ.
ESZ	Outputs an E, a sign, and a one-digit exponent.
ESZZ	Outputs an E, a sign, and a two-digit exponent.
ESZZZ	Outputs an E, a sign, and a three-digit exponent.
A	Outputs a string character. Trailing blanks are output if the number of characters specified is greater than the number available in the string. If the image specifier is exhausted before the string, the remaining characters are not sent.
X	Outputs a blank.
literal	Outputs the characters contained in the literal.
B	Outputs the character represented by one byte of data. This is similar to the CHR\$ function. The number is rounded to an INTEGER and the least-significant byte is sent.
W	Outputs a 16-bit word as a two's-complement integer. On an 8-bit interface, the most-significant byte is sent first. The word is always sent in a single operation on a 16-bit interface. Files, string variables, and buffers are treated as 8-bit destinations. Pad bytes are sent if necessary to achieve word-boundary alignment.
Y	Like W, except that pad bytes are not sent. Does not override a BYTE attribute used with a 16-bit interface. (Requires IO.)

Specifier	Meaning
#	Suppresses automatic output of the EOL (End-Of-Line) sequence following the last output item.
%	Ignored in output images.
+	Changes the automatic EOL sequence to a single carriage-return. (Requires IO.)
-	Changes the automatic EOL sequence to a single line-feed. (Requires IO.)
/	Outputs a carriage-return and a line-feed.
L	Outputs the current EOL sequence. The default is CR/LF. With IO, the sequence may be redefined with ASSIGN or PRINTER IS.
@	Outputs a form-feed.

IMOVE

Requires GRAPH

This statement updates the logical pen position, by adding the X and Y displacements to the current logical pen position.

```
IMOVE X+50,0
IMOVE Delta_x,Delta_y
```

INDENT

Requires PDEV

This program editing command indents a program to reflect its structure and nesting.

```
INDENT
INDENT 8,4
```

INITIALIZE

This statement prepares mass storage media for use by the computer. When INITIALIZE is executed, **any data on the media is lost**. See MASS STORAGE IS.

```
INITIALIZE ":INTERNAL"
INITIALIZE ":HP9895,700,1"
INITIALIZE Disc$,Interleave
INITIALIZE ":MEMORY,0,2",Sectors
INITIALIZE Disc$,Interleave,Format
```

INPUT

This statement is used to assign keyboard input to program variables. Also see LINPUT.

```
INPUT "Name?",N$,"ID Number?",Id
INPUT "Enter 3 numbers",V(1),V(2),V(3)
INPUT "",String$(1;10)
INPUT Array(*)
```

INT

This function returns the greatest integer which is less than or equal to the expression. The result will be of the same type (REAL or INTEGER) as the argument. For all X, $X = \text{INT}(X) + \text{FRACT}(X)$.

```
Whole=INT(Number)
PRINT "Integer Portion =" ;INT(X)
```

INTEGER

This statement declares INTEGER variables, dimensions INTEGER arrays, and reserves memory for them.

```
INTEGER I,J,K
INTEGER Array(-128;255,4)
INTEGER Buf(2000) BUFFER
```

INTENSITY

See AREA and SET PEN.

INTERACTIVE

See RESUME INTERACTIVE and SUSPEND INTERACTIVE.

INTR

See OFF INTR and ON INTR.

INV

See MAT.

IPLOT

Requires GRAPH

This statement moves the pen from the current pen position to a position calculated by adding the specified X and Y displacements to the current pen position. Plotting action is determined by the current line type and the optional pen control parameter (see PLOT).

```
IPLOT 0,5
IPLOT Delta_x,Delta_y,Pen_control
```

Requires GRAPHX

```
IPLOT Array(*)
IPLOT Shape(*),FILL,EDGE
```

IVAL

This function converts a binary, octal, decimal, or hexadecimal character representation into an INTEGER.

```
Number=IVAL(String$,Radix)
PRINT IVAL("FE56",16)
```

IVAL\$

This function converts an INTEGER into a binary, octal, decimal, or hexadecimal string representation.

```
String$=IVAL$(Number,Radix)
PRINT IVAL$(Count MOD 256,2)
```

K

KBD

This function returns 2, the device selector of the keyboard.

```
STATUS KBD:Kbd_status
OUTPUT KBD:Clear$;
```

KBD\$

This function returns the contents of the keyboard buffer. Also see ON KBD.

```
PRINT KBD$;
Buffer$=Buffer$&&KBD$
```

KEY

See EDIT, LIST, LOAD, OFF KEY, ON KEY, SCRATCH, and STORE.

KNOB

See OFF-KNOB and ON KNOB.

KNOBX

This function returns the net number of horizontal knob pulses counted since the last time the KNOBX counter was zeroed. Invoking the KNOBX function zeros the counter after it is read. Also see ON KNOB.

```
Position=KNOBX
IF KNOBX<0 THEN Backwards
```

KNOBY

This function returns the net number of vertical knob pulses counted since the last time the KNOBY counter was zeroed. Invoking the KNOBY function zeros the counter after it is read. Also see ON KNOB.

```
Position=KNOBY
IF KNOBY<0 THEN Up
```

L

LABEL

Requires GRAPH

This statement sends text to graphic devices. See IMAGE for specifier descriptions.

```
LABEL Number,String$
LABEL X(Offset)+K;A$[1,B];
LABEL Array(*)
LABEL USING 160;X,Y,Z
LABEL USING "SZ,DD";Money
```

LDIR

Requires GRAPH

This statement defines the angle at which labels are drawn. The angle is interpreted as counter-clockwise, from three o'clock. The current angle mode is used.

```
LDIR 90
LDIR ACS(Side)
```

LEN

This function returns the current number of characters in the argument. The length of the null string is 0.

```
Last=LEN(String$)
IF NOT LEN(A$) THEN Empty
```

LET

This is the assignment statement, which is used to assign values to variables. The keyword "LET" is optional.

```
LET Number=33
Array(I+1)=Array(I)/2
String$="Hello Scott"
A$(7)[1;2]=CHR$(27)&"Z"
```

LEXICAL ORDER IS

Requires LEX

This statement defines the collating sequence for all string operations.

```
LEXICAL ORDER IS ASCII
LEXICAL ORDER IS STANDARD
LEXICAL ORDER IS FRENCH
LEXICAL ORDER IS GERMAN
LEXICAL ORDER IS SPANISH
LEXICAL ORDER IS SWEDISH
LEXICAL ORDER IS My_lex_table(*)
```

LGT

This function returns the common logarithm (base 10) of its argument.

```
Decibel=20*LGT(Volts)
PRINT "Log of";X;"=";LGT(X)
```

LINE TYPE

Requires GRAPH

This statement selects a line type and repeat length for all subsequent lines. CRT line types are shown below.

```
LINE TYPE 1
LINE TYPE Style,Repeat_len
```

	LINE TYPE 10	
	LINE TYPE 9	
	LINE TYPE 8	
	LINE TYPE 7	
	LINE TYPE 6	
	LINE TYPE 5	
	LINE TYPE 4	
	LINE TYPE 3	
	LINE TYPE 2	
	LINE TYPE 1	

LINPUT

This statement accepts alphanumeric input from the keyboard for assignment to a string variable. The LINPUT statement allows commas or quotation marks to be included in the value of the string, and leading or trailing blanks are not deleted.

```
LINPUT "Next Command?",Response$  
LINPUT Array$(I)[3]
```

LIST

This statement lists the program currently in memory to the selected device. Beginning and ending line labels or numbers may be specified to list parts of the program. With KBD, the typing-aid definitions can be listed. LIST BIN lists the name and version number of each BIN currently in memory, along with a short description of the capabilities they provide.

```
LIST  
LIST #701  
LIST #Device;Label1,Label2  
LIST 110,250  
LIST BIN
```

Requires KBD

```
LIST KEY #Printer
```

LISTEN

See SEND.

LOAD

This statement loads programs, or binary programs into memory. With KBD the statement loads typing-aid definitions. Also see GET.

```
LOAD File_name$  
LOAD "TEMP:INTERNAL,4,1",Run_line  
LOAD BIN "ERR"&Msus$
```

Requires KBD

```
LOAD KEY "AIDS"
```

LOADSUB

This statement loads BASIC subprograms from a file of type PROG into memory. See STORE.

```
LOADSUB ALL FROM "George"  
LOADSUB ALL FROM Name$&Msus$  
LOADSUB Fred FROM Name$  
LOADSUB FNConvert$ FROM "STRFUNCTS"
```

Requires PDEV

```
LOADSUB FROM "My_subs:HP9895,700,1"
```

LOCAL

Requires IO

This statement returns all specified devices to their local state.

```
LOCAL @Dvm  
LOCAL 728  
LOCAL Isc
```

LOCAL LOCKOUT

Requires IO

This HP-IB statement sends the LLO (local lockout) message, which prevents local (front panel) control of devices in the remote state.

```
LOCAL LOCKOUT 7  
LOCAL LOCKOUT Isc  
LOCAL LOCKOUT @Heib
```

LOCATOR

See READ LOCATOR and SET LOCATOR.

LOCK

Requires SRM

This statement prevents other SRM workstation computers from accessing the remote file to which the I/O path is currently assigned. Multiple LOCKs may be done on a file; the same number of unlocks must be done. If you do an ASSIGN @Path to *, the computer will do the appropriate number of UNLOCKS before closing the file. See also UNLOCK.

```
LOCK @File:CONDITIONAL Result  
IF A THEN LOCK @File:CONDITIONAL Result
```

LOG

This function returns the natural logarithm (base e) of the argument. See LGT.

```
Time=-1*Rc*LOG(Volts/Emf)
PRINT "Natural log of "Y;"="LOG(Y)
```

LOOP

This construct defines a loop which is repeated until the expression in an EXIT IF statement is evaluated as true (non-zero). There may be any number of EXIT IF statements, but they must be at the same nesting level as the LOOP statement.

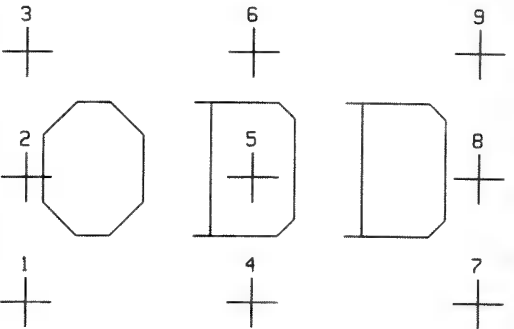

```
550 LOOP
560 Test=RND-.5
570 EXIT IF Test>.4
580 CALL Simulate
590 END LOOP
```

LORG

Requires GRAPH

This statement specifies the relative origin of labels with respect to the current pen position.

```
LORG New_lors
IF Y>Limit THEN LORG 3
```

LWC\$

This function returns a string formed by replacing any uppercase characters with their corresponding lowercase character.

```
Lower$=LWC$(Mixed$)
IF LWC$(Answer$)="y" THEN True_test
```

M

MASS STORAGE IS

This statement specifies the system mass storage device. It may be abbreviated as MSI when typed from the keyboard. Note that some device type specifiers work for more than one model of disc drive.

```
MASS STORAGE IS ":INTERNAL"
MASS STORAGE IS ":,700,1"
MASS STORAGE IS Msus$
```

BIN Required	Device Type
none	INTERNAL MEMORY
DISC & HPIB or FHPIB	HP9895 HP9121 HP9133 HP9134 HP9135 HP913X
DISC & HPIB	HP82901 HP82902 HP8290X
CS80 & HPIB or FHPIB	CS80 (7908, 7911, 7912, 7914, 9122...)
HP9885 & GPIO	HP9885
SRM & DCOMM	REMOTE
BUBBLE	BUBBLE
EPROM	EPROM

MAT

Requires MAT

This statement can be used to initialize string and numeric arrays, copy string and numeric arrays, and perform operations on numeric arrays.

```
MAT Array= A*(Ref+1/3)
MAT String$= (RPT$(" ",80))
MAT Clone= Parent
MAT A= Array1<>Array2
MAT Vector= CSUM(Matrix)
MAT Vector= RSUM(Matrix)
MAT Transposition= TRN(Matrix)
MAT Identity= IDN
MAT Inverse= INV(Matrix)
```

MAT REORDER

Requires MAT

This statement reorders elements in an array according to the subscript list in a vector.

```
MAT REORDER Array BY Vector,Dimension
MAT REORDER Lines$ BY New_order
```

MAT SORT

Requires MAT

This statement sorts an array along one dimension according to lexical or numerical order.

```
MAT SORT Array(Tag,*)
MAT SORT Vals(1,*,3),(2,*,5) DES
MAT SORT Start_vec TO End_vec
MAT SORT String$(*,2)[1:3] TO Order
```

MAX

Requires MAT

This function returns a value equal to the greatest value in the list of arguments. Each element of an array is considered a separate value.

```
Biggest=MAX(Elements(*))
PRINT MAX(Item1,17,Total/3)
Result=MAX(Floor,MIN(Ceiling,Argument))
```

MAXREAL

This function returns the largest positive REAL number available in the range of the machine. Its value is approximately 1.797 693 134 862 32E + 308.

```
IF X<=LGT(MAXREAL) THEN Y=10*X
Half_max=MAXREAL/2
```

MIN

Requires MAT

This function returns a value equal to the least value in the list of arguments. Each element of an array is considered a separate value.

```
Smallest=MIN(Elements(*))
PRINT MIN(Item1,17,Total/3)
```

MINREAL

This function returns the smallest positive REAL number available in the range of the machine. Its value is approximately 2.225 073 858 507 24E-308.

```
IF X>=LOG(MINREAL) THEN Y=EXP(X)
```

MOD

This operator returns the remainder of a division (see also MODULO).

```
Remainder=Dividend MOD Divisor
PRINT "Seconds =" ; Time MOD 60
```

MODULO

This operator returns the remainder of a division just like MOD, only with one additional constraint—the result satisfies:

$$0 \leq (X \text{ MODULO } Y) < Y \text{ if } Y > 0$$
$$Y < (X \text{ MODULO } Y) \leq 0 \text{ if } Y < 0$$

```
Remainder=Dividend MODULO Divisor
PRINT "Seconds =" ; Time MODULO 60
```

MOVE

Requires GRAPH

This statement updates the logical pen position.

```
MOVE 10,75
MOVE Next_x,Next_y
```

MOVELINES

Requires PDEV

This program editing statement moves contiguous program lines from one location to another. If only one line identifier is specified, only that line is moved. See COPYLINES.

```
MOVELINES 1200 TO 3250
MOVELINES 10,440 TO 540
MOVELINES Label1,Label12 TO Label13
```

MSI

See MASS STORAGE IS.

MTA

See SEND.

N

NEXT

See FOR...NEXT.

NOT

This operator returns 1 if its argument equals 0. Otherwise, 0 is returned.

```
Invert_flag=NOT Std_device
IF NOT My_job THEN Sleep
```

NPAR

This function returns the number of parameters passed to the current subprogram.

```
IF NPAR>3 THEN Extra
Factors=NPAR-2
```

NUM

This function returns the decimal value of the ASCII code of the first character in the argument. The range of returned values is 0 thru 255.

```
Ascii_val=NUM(String$)
A$(I+1)=CHR$(NUM(A$(I))+32)
```

O

OFF CYCLE

Requires CLOCK

This statement cancels event-initiated branches previously defined and enabled by an ON CYCLE statement.

```
OFF CYCLE
IF Kick_stand THEN OFF CYCLE
```

OFF DELAY

Requires CLOCK

This statement cancels event-initiated branches previously defined and enabled by an ON DELAY statement.

```
OFF DELAY
IF Done THEN OFF DELAY
```

OFF END

This statement cancels event-initiated branches previously defined and enabled by an ON END statement. Subsequent EOR and EOF conditions generate an error.

```
OFF END @File
IF Special THEN OFF END @Source
```

OFF EOR

Requires TRANS

This statement cancels event-initiated branches previously defined and enabled by an ON EOR statement.

```
OFF EOR @Device
OFF EOR @File
```

OFF EOT

Requires TRANS

This statement cancels event-initiated branches previously defined and enabled by an ON EOT statement.

```
OFF EOT @Device
OFF EOT @File
```

OFF ERROR

This statement cancels event-initiated branches previously defined and enabled by an ON ERROR statement. Subsequent errors are reported to the user in the usual fashion.

```
OFF ERROR
```

OFF INTR

Requires IO

This statement cancels event-initiated branches previously defined by an ON INTR statement.

```
OFF INTR
OFF INTR 12
OFF INTR HpiB
```

OFF KBD

This statement cancels event-initiated branches previously defined and enabled by an ON KBD statement. Subsequent keypresses are sent to the operating system in the normal manner.

```
OFF KBD
```

OFF KEY

This statement cancels event-initiated branches previously defined and enabled by an ON KEY statement. Without KBD, subsequent softkey presses cause beeps. With the KBD BIN, the action of subsequent softkey presses depends upon the typing-aid definitions.

```
OFF KEY 4
IF C_sharp AND NOT B_flat THEN OFF KEY
OFF KEY Current_Key
```

OFF KNOB

This statement cancels event-initiated branches previously defined and enabled by the ON KNOB statement. Subsequent use of the knob results in normal scrolling or cursor movement.

```
OFF KNOB
```

OFF SIGNAL

Requires IO

This statement cancels event-initiated branches previously defined and enabled by an ON SIGNAL statement.

```
OFF SIGNAL
OFF SIGNAL Sig_number
```

OFF TIME

Requires CLOCK

This statement cancels event-initiated branches previously defined and enabled by an ON TIME statement.

```
OFF TIME
```

OFF TIMEOUT

This statement cancels event-initiated branches previously defined and enabled by an ON TIMEOUT statement.

```
OFF TIMEOUT
OFF TIMEOUT 12
OFF TIMEOUT HpiB
```

ON

This statement transfers program execution to one of several destinations selected by the value of the pointer.

```
ON X1 GOTO 100,150,170
IF Point THEN ON Point GOSUB First,
    Second,Third,Last
```

ON CYCLE

Requires CLOCK

This statement defines and enables an event-initiated branch to be taken each time the specified number of seconds has elapsed.

```
ON CYCLE Seconds,Priority CALL Sub_name
ON CYCLE Max_time RECOVER Backup
ON CYCLE 3600,3 GOTO 1200
```

ON DELAY

Requires CLOCK

This statement defines and enables an event-initiated branch to be taken after the specified number of seconds has elapsed.

```
ON DELAY Seconds,Priority CALL Sub_name
ON DELAY 3 GOTO 5710
ON DELAY Max_time,4 GOSUB No_operator
```

ON END

This statement defines and enables an event-initiated branch to be taken when end-of-file is reached on the mass storage file associated with the specified I/O path.

```
ON END @Source GOTO 500
ON END @File RECOVER Next_file
ON END @Path CALL Sub_name
```

ON EOR

Requires TRANS

This statement defines and enables an event-initiated branch to be taken when an end-of-record is encountered during a TRANSFER.

```
ON EOR @Path,Priority CALL Sub_name
ON EOR @Device GOTO 1500
ON EOR @File,2 GOSUB Label1
```

ON EOT

Requires TRANS

This statement defines and enables an event-initiated branch to be taken when the last byte is transferred by a TRANSFER statement.

```
ON EOT @Path,Priority CALL Sub_name
ON EOT @Device GOTO 1500
ON EOT @File,2 GOSUB Label1
```

58

ON ERROR

This statement defines and enables an event-initiated branch which results from a trappable error. This allows you to write your own error-handling routines.

```
ON ERROR GOTO 1200
ON ERROR RECOVER Crash
ON ERROR CALL Report
```

ON INTR

Requires IO

This statement defines an event-initiated branch to be taken when an interface card generates an interrupt. The interrupts must be explicitly enabled with an ENABLE INTR statement.

```
ON INTR 7 GOTO 500
ON INTR Hrib,4 GOSUB Service
ON INTR Isc,Priority CALL Sub_name
```

ON KBD

This statement defines and enables an event-initiated branch to be taken when a key is pressed. See KBD\$.

```
ON KBD GOTO 150
ON KBD,Priority GOSUB Label1
ON KBD ALL RECOVER 880
ON KBD ALL,3 CALL Sub_name
```

ON KEY

This statement defines and enables an event-initiated branch to be taken when a softkey is pressed.

```
ON KEY 0 GOTO 150
ON KEY Number,Priority GOSUB Label1
ON KEY 10 LABEL A$ RECOVER 770
ON KEY 5 LABEL "Print",3 CALL Report
```

ON KNOB

This statement defines and enables an event-initiated branch to be taken when the knob is turned. See KNOBX and KNOBY.

```
ON KNOB .1 GOTO 250
ON KNOB Seconds,Priority CALL Sub_name
ON KNOB 1/2,4 GOSUB Label1
```

59

ON SIGNAL

Requires IO

This statement defines and enables an event-initiated branch to be taken when a SIGNAL statement is executed using the same signal selector.

```
ON SIGNAL Selector,Priority CALL Sub_name
ON SIGNAL RECOVER Trap
ON SIGNAL B GOTO 770
```

ON TIME

Requires CLOCK

This statement defines and enables an event-initiated branch to be taken when the clock reaches a specified time.

```
ON TIME Seconds,Priority CALL Sub_name
ON TIME TIMEDATE+3600 GOTO 1440
ON TIME Alarm,15 GOSUB Label3
```

ON TIMEOUT

This statement defines and enables an event-initiated branch to be taken when an I/O timeout occurs on the specified interface.

```
ON TIMEOUT 7,4 GOTO 770
ON TIMEOUT 1sc,Seconds CALL Sub_name
ON TIMEOUT 12,1/2 RECOVER Label1
```

OPTION BASE

This statement specifies the default lower bound of arrays. Zero is the assumed lower bound unless an OPTION BASE statement is executed.

```
OPTION BASE 0
OPTION BASE 1
```

OPTIONAL

See DEF FN and SUB.

OR

This operator returns a 1 or a 0 based on the logical inclusive OR of the arguments.

```
X=Y OR Z
IF File_type OR Device THEN Process
```

OUTPUT

This statement outputs items to a specified destination. See IMAGE for specifier descriptions.

```
OUTPUT 701;Number,String$;
OUTPUT @File;Array(*),END
OUTPUT @Random;Record USING Fmt1;Item(5)
OUTPUT 12 USING "#,6A";B$(2;6)
OUTPUT Dest$ USING 110;A/1000,VAL$(Res),
OUTPUT @Printer;Rank;Id;Name$
```

P

PARITY

See ASSIGN.

PASS CONTROL

Requires IO

This statement passes Active Controller capability to a specified HP-IB device.

```
PASS CONTROL 719
PASS CONTROL @Device
```

PAUSE

This statement suspends program execution. See CONT.

PAUSE

PDIR

Requires GRAPH

This statement specifies the angle at which the output from IPLOT, RPLOT, POLYGON, POLYLINE, and RECTANGLE is produced.

```
PDIR 30
IF Done THEN PDIR Old_angle
```

PEN

Requires GRAPH

This statement selects a pen on the current plotting device.

PEN -1
PEN Select

For monochrome CRTs:

PEN>0 draws
PEN=0 complements
PEN<0 erases

For Model 36C with GRAPHX, the default color-mapped pen colors are:

PEN	Color	PEN	Color
0	Black	8	Black
1	White	9	Olive Green
2	Red	10	Aqua
3	Yellow	11	Royal Blue
4	Green	12	Maroon
5	Cyan	13	Brick Red
6	Blue	14	Orange
7	Magenta	15	Brown

For non-color-mapped mode, only pens -7 thru +7 are used, and PEN 0 complements.

PENUP

Requires GRAPH

This statement lifts the pen on the current plotting device.

PENUP

PI

This function returns 3.141 592 653 589 79, which is an approximate value for π .

Area=PI*Radius^2
PRINT X,X*2*PI

PIVOT

Requires GRAPH

This statement specifies a rotation of coordinates which is applied to all drawn lines, but not to labels or axes. The current angle mode is used.

PIVOT 30
IF Special THEN PIVOT Radians

PLOT

Requires GRAPH

This statement moves the pen from the current pen position to the specified X and Y coordinates. Plotting action is determined by the current line type and the optional pen control parameter.

PLOT 20,90
PLOT Next_x,Next_y,Pen_control

Pen Control	Pen Action
Negative Even	Up before move
Negative Odd	Down before move
Positive Even	Up after move
Positive Odd	Down after move
Default	Down after move

Requires GRAPHX

PLOT Array(*)
PLOT Shape(*),FILL,EDGE

The plotting array must be 2-column or 3-column. 2-column arrays contain X and Y coordinates and assume a pen control of +1. The interpretation of a 3-column array is shown in the following table.

Col 1	Col 2	Col 3	Meaning
X	Y	< -2	Like -1 or -2
X	Y	-2	Pen up before move
X	Y	-1	Pen down before move
X	Y	0	Pen up after move
X	Y	1	Pen down after move
X	Y	2	Pen up after move
Pen #	-	3	Select pen
Line Type	Repeat	4	Select line type
Color	-	5	Color value for FILL
-	-	6	Start polygon with FILL
-	-	7	End polygon
-	-	8	End of array data
-	-	9	No-op
-	-	10	Start polygon with EDGE
-	-	11	Start polygon w/ FILL & EDGE
-	-	12	FRAME
Pen #	-	13	Area pen select
Red	Green	14	Color value for FILL
Blue	-	15	Color value for FILL
-	-	>15	Ignored

PLOTTER IS

Requires GRAPH

This statement selects a plotting device. Device 3, "INTERNAL" (the CRT) is assumed unless a PLOTTER IS statement is executed.

```
PLOTTER IS Device,Id$
PLOTTER IS 705,"HPGL"
PLOTTER IS 28,"98627A;US TV"
PLOTTER IS 05,"98627A;EURO STD"
PLOTTER IS CRT,"INTERNAL";COLOR MAP
PLOTTER IS "MyBdatfile:INTERNAL","HPGL"
PLOTTER IS "file","HPGL",P1x,P2x,P1y,P2y
```

These are the valid plotter specifiers when dealing with an HP98627A card:

Desired Display Format	Plotter Specifier
Standard Graphics 512 by 390 pixels, 60 Hz, non-interlaced	"98627A" or "98627A;US STD"
512 by 390 pixels, 50 Hz, non-interlaced	"98627A;EURO STD"
High-Resolution Graphics 512 by 512 pixels, 46.5 Hz, non-interlaced	"98627A;HI RES"
TV Compatible Graphics 512 by 474 pixels, 60 Hz, interlaced (30 Hz refresh rate)	"98627A;US TV"
512 by 512 pixels, 50 Hz, interlaced (25 Hz refresh rate)	"98627A;EURO TV"

POLYGON

Requires GRAPHX

This statement draws all or part of a closed regular polygon.

```
POLYGON Radius,Total_sides,Drawn_sides
POLYGON -Size,5,FILL,EDGE
```

POLYLINE

Requires GRAPHX

This statement draws all or part of an open regular polygon.

```
POLYLINE Radius,Total_sides,Drawn_sides
POLYLINE -Size,5
```

POS

This function returns the first position of a substring within a string.

```
Point=POS(Big$,Little$)
IF POS(A$,CHR$(10)) THEN Line_end
```

PPOLL

Requires IO

This function conducts a Parallel Poll and returns a byte representing eight status-bit messages of the devices on an HP-IB.

```
Stat=PPOLL(7)
IF BIT(PPOLL(@Hpib),3) THEN Respond
```

PPOLL CONFIGURE

Requires IO

This statement programs the logical sense and data bus line on which a specified device responds to a parallel poll. Response line is specified by bits 0 thru 2 and logic sense is specified by bit 3.

```
PPOLL CONFIGURE 711;2
PPOLL CONFIGURE @Dum;Response
```

PPOLL RESPONSE

Requires IO

This statement defines the computer's response to a Parallel Poll on an HP-IB interface.

```
PPOLL RESPONSE IsciService
PPOLL RESPONSE @Hpib;1
```

PPOLL UNCONFIGURE

Requires IO

This statement disables the parallel poll response of a specified device or devices.

```
PPOLL UNCONFIGURE 7
PPOLL UNCONFIGURE Device
PPOLL UNCONFIGURE @Plotter
```

PRINT

This statement sends items to the PRINTER IS device. See IMAGE for specifier descriptions.

```
PRINT "LINE";Number;
PRINT Array(*),
PRINT TABXY(1,1),Head$,TABXY(Col,3),Msg$
PRINT String$(1,8),TAB(12),Result
PRINT USING 125;X,Y,Z
PRINT USING "5Z,DD";Money
PRINT USING Fmt3;Id,Item$,Kilograms/2.2
```

PRINTALL IS

This statement assigns a logging device for recording operator interaction and troubleshooting messages. The PRINTALL device is 1 (the CRT) at power-on and after SCRATCH A.

```
PRINTALL IS 701
PRINTALL IS Gpio
```

Requires IO

```
PRINTALL IS 707;EOL My$ DELAY .5
PRINTALL IS Device;WIDTH 120,EOL My$ END
```

PRINTER IS

This statement specifies the system printing device for all PRINT, CAT and LIST statements which do not specify a destination. The PRINTER IS device is 1 (the CRT) at power-on and after SCRATCH A.

```
PRINTER IS 701
PRINTER IS Gpio
PRINTER IS "MyBDATfile"
```

Requires IO

```
PRINTER IS 707;EOL My$ DELAY .5
PRINTER IS Device;WIDTH 120,EOL My$ END
```

PRINT LABEL

Requires MS

This statement gives a name to a mass storage volume.

```
PRINT LABEL "MyVol"
PRINT LABEL Volume_name$ TO Msus$
```

PRIORITY

See SYSTEM PRIORITY.

PROTECT

This statement specifies the protect code for non-SRM files. Only PROG, BDAT, and BIN files can be protected with this form of the statement.

```
PROTECT Name$,Pc$  
PROTECT "George<xy>":INTERNAL,4,1,"NEW"
```

Requires SRM

The following form of the PROTECT statement is valid only for SRM files, and any type of file can be protected.

```
PROTECT "File<old>","(Mgr":MANAGER),  
      ("rw":READ,WRITE),("Read":READ)  
PROTECT "File<old>","(old":DELETE)
```

PROUND

This function returns the value of the argument rounded to a specified power of ten.

```
Money=PROUND(Result,-2)  
PRINT PROUND(Quantity,Decimal_Place)
```

PRT

This function returns 701, the factory-set device selector for an external printer.

```
PRINTER IS PRT  
OUTPUT PRT;Text$
```

PURGE

This statement deletes a file entry from the directory of a mass storage media.

```
PURGE Name$&Msus  
PURGE "TEMP:INTERNAL,4,1"  
PURGE "George<PC>"
```

R

RAD

This statement selects radians as the unit of measure for expressing angles. See DEG.

RAD

RANDOMIZE

This statement selects a seed for the RND function.

```
RANDOMIZE  
RANDOMIZE Old_seed*PI
```

RANK

Requires MAT

This function returns the number of dimensions in an array.

```
Dimensions=RANK(Array$)  
IF RANK(A)=2 THEN PRINT "A is a matrix"
```

RATIO

Requires GRAPH

This function returns the ratio of the X hard-clip limits to the Y hard-clip limits for the current PLOTTER IS device.

```
WINDOW 0,10*RATIO,-10,10  
X_gdu_max=100*MAX(1,RATIO)  
Y_gdu_max=100*MAX(1,1/RATIO)
```

READ

This statement reads values from DATA statements and assigns them to variables.

```
READ Number,String$  
READ Array(*)  
READ Field$(5,15)  
READ Item(1,1),Item(2,1),Item(3,1)
```

READIO

This function reads the contents of the specified hardware register on the specified interface.

```
Upper_byte=READIO(Gpio,4)  
PRINT "Register";I;"=";I;READIO(7,I)
```

READ LABEL

Requires MS

This statement reads a volume label into a string variable.

```
READ LABEL Volume_name$  
READ LABEL Vol_name$ FROM M$us$
```

READ LOCATOR

Requires GRAPHX

This statement samples the locator device without waiting for a digitize operation. See GRAPHICS INPUT IS.

```
READ LOCATOR X_Pos,Y_Pos  
READ LOCATOR X,Y,Status$
```

REAL

This statement reserves storage for floating point variables and arrays.

```
REAL X,Y,Z  
REAL Array(-128:127,15)  
REAL Buf(100) BUFFER
```

RECORDS

See TRANSFER.

RECOVER

A secondary keyword which causes control to return to the specified line when an event occurs. Multiple contexts may be skipped coming back to the specified line. This keyword works with all ON...<event> interrupts. See the *BASIC Language Reference* under the appropriate ON... heading for further information.

```
ON KBD RECOVER 1200  
ON ERROR RECOVER Fix_error
```

RECTANGLE

Requires GRAPHX

This statement draws a rectangle.

```
RECTANGLE Width,Height  
RECTANGLE 4,-6,FILL,EDGE
```

REDIM

Requires MAT

This statement changes the subscript range of previously dimensioned arrays.

```
REDIM Array(New_lower:New_upper)  
REDIM String$(A,B,C)
```

REM

This statement allows comments in a program.

```
100 REM Program Title  
190 !  
200 Info=0 ! Clear flag byte
```

REMOTE

Requires IO

This statement places HP-IB devices having remote/local capabilities into the remote state.

```
REMOTE 712  
REMOTE Device  
REMOTE @Hpib
```

REN

This command rennumbers the lines in a program. The default for both parameters is 10.

```
REN 1000  
REN 100,2  
REN 261,1 IN 260,Label2
```

RENAME

This statement changes a file's name in a mass storage media's directory.

```
RENAME "TEMP<pc>" TO "FINAL"  
RENAME "OLD:INTERNAL,4,1" TO "NEW"  
RENAME Name$&M$us$ TO Temp$
```

REORDER

See MAT REORDER.

REPEAT...UNTIL

This construct defines a loop which is repeated until the expression in the UNTIL statement is evaluated as true (non-zero).

```
770 REPEAT
780   CALL Process(Param)
790   Param=Param*Scaling
800 UNTIL Param>Maximum
```

REQUEST

Requires IO

This statement is used to send a Service Request (SRQ) on an HP-IB when the computer is non-active controller. To request service, the response must have bit 6 set.

```
REQUEST IsciResponse
REQUEST @Hpib;Bit_6+Bit_0
```

RE-SAVE

This statement creates an ASCII file and copies program lines as strings into that file. If the specified file already exists, the old entry is purged after the new file is successfully saved.

```
RE-SAVE File$,First_line,Last_line
RE-SAVE "George"
RE-SAVE "TEMP:INTERNAL,4,1",Label1
RE-SAVE Name$&Msus$,1,Sort
```

RES

This function returns the result of the last numeric calculation which was executed from the keyboard.

```
Result=RES
IF Last_result<>RES THEN PRINT RES
```

RESET

Requires IO

This statement resets an interface or the pointers of either a mass storage file or a buffer.

```
RESET 20
RESET Hpib
RESET @Buffer
```

RESTORE

RESTORE specifies which DATA statement will be used by the next READ operation.

```
RESTORE
RESTORE Third_array
```

RE-STORE

This statement creates a file and stores either an internal form of the BASIC program or typing-aid key definitions. If the specified file already exists, the old entry is purged after the new file is successfully stored.

```
RE-STORE Name$&Msus$
RE-STORE "TEMP:INTERNAL,4,1"
```

Requires KBD

RE-STORE KEY "AIDS"

RESUME INTERACTIVE

This statement restores the normal functions of any program control keys previously deactivated by SUSPEND INTERACTIVE.

RESUME INTERACTIVE

RETURN

This statement returns program execution to the line following the invoking GOSUB. The keyword RETURN is also used in user-defined functions (see DEF FN).

To return from a GOSUB subroutine:

RETURN

To return a value from a user-defined function:

```
RETURN Value
RETURN 13774
RETURN SIN(X)-4*EXP(SIN(PI/Q))
RETURN File$&Msus$
```

REV\$

This function returns a string formed by reversing the sequence of characters in the argument.

```
Reverse$=REV$(Forward$)
Last_blank=LEN(A$)-POS(REV$(A$)," ")
```

RND

This function returns a pseudo-random number greater than 0 and less than 1.

```
Percent=RND*100
IF RND<.5 THEN Case1
```

ROTATE

This function returns an integer which equals the value obtained by shifting the 16-bit binary representation of the argument the number of bit positions specified. The shift is performed with wraparound. Also see SHIFT.

```
New_word=ROTATE(Old_word,2)
Q=ROTATE(Q,Places)
```

RPLOT

Requires GRAPH

This statement moves the pen from the current pen position to the specified relative X and Y position. The relative origin is set by line drawing statements other than RPLOT. The plotting action is determined by the current line type and the optional pen control parameter (see PLOT).

```
RPLOT 10,12
RPLOT Rel_x,Rel_y,Pen_control
```

Requires GRAPHX

```
RPLOT Array(*)
RPLOT Shape(*),FILL,EDGE
```

RPT\$

This function returns a string formed by repeating the argument a specified number of times.

```
PRINT RPT$(" ",80)
Center$=RPT$(" ",(Right-Left-Length)/2)
```

RSUM

See MAT.

RUN

This command starts program execution at the specified line. If no parameter is specified, the program starts at the beginning.

```
RUN
RUN 10
RUN Part2
```

S

SAVE

This statement creates an ASCII file and copies program lines as strings into that file.

```
SAVE File$,First_line,Last_line
SAVE "WHALES"
SAVE "TEMP:INTERNAL,4,1",Label1
SAVE Name$&Msus$,1,Sort
```

SC

This function returns the interface select code associated with an I/O path name.

```
Interface=SC(@Device)
Drive_isc=SC(@File)
```

SCRATCH

This command erases all or selected portions of memory.

SCRATCH clears the BASIC program from memory. All variables not in COM are also cleared.

SCRATCH C clears all variables, including those in COM. The program is left intact.

SCRATCH A clears the BASIC program memory, all typing-aid key definitions, and all variables, including those in COM. Most internal parameters in the computer are reset to power-on values by this command.

SCRATCH BIN does what a SCRATCH A does, plus it deletes all BINs except the CRT driver for the CRT in use.

Requires KBD

SCRATCH KEY
SCRATCH KEY 2

This clears the typing-aid definition of all softkeys or the selected softkey.

SEC

See SEND.

SECURE

Requires PDEV

This command protects programs lines so they cannot be listed.

SECURE
SECURE Check_Password
SECURE Routine1,Routine2

SELECT...CASE

This construct provides conditional execution of one program segment chosen from several.

```
600 SELECT String$
610 CASE "0" TO "9"
620   GOSUB Digits
630 CASE ";"
640   GOSUB Delimiter
650 CASE <CHR$(32)>,>CHR$(126)
660   GOSUB Control_chr
670 CASE ELSE
680   GOSUB Ignore
690 END SELECT
```

SEND

Requires IO

This statement sends messages to an HP-IB.

```
SEND 7;UNL MTA LISTEN 1 DATA "HELLO" END
SEND @Hr1b;UNL MLA TALK Prime CMD 24+128
```

CMD

The following expressions are sent as bytes with ATN true.

DATA

The following expressions are sent as bytes with ATN false. If END is added, EOI is set on the last byte.

LISTEN

Following expression(s) sent as listen address (ATN true).

MLA

Sends my listen address (ATN true).

MTA

Sends my talk address (ATN true).

SEC

Following expression(s) sent as secondary address (ATN true).

TALK

Following expression sent as talk address (ATN true).

UNL

Sends unlisten command (ATN true).

UNT

Sends untalk command (ATN true).

SET ECHO

This statement sets an echo to the specified location on the current PLOTTER IS device.

```
SET ECHO X_location,Y_location
SET ECHO 1000,2200
```

SET LOCATOR

This statement specifies a new position for the locator on the current graphics input device.

```
SET LOCATOR 12,95
SET LOCATOR Old_x,Old_y
```

SET PEN

This statement defines the color of one or more entries in the color map. Any pixels already drawn with the specified pen are changed to the new color. The following table shows HSL values for the default color map entries.

```
SET PEN P_num COLOR Hue,Saturate,Luminous
SET PEN Selector INTENSITY Red,Blue,Green
SET PEN Start_pen COLOR Hsl_array(*)
SET PEN 2 INTENSITY 4/15,1/15,9/15
```

Pen	Color	Hue	Sat.	Lum.
0	Black	0	0	0
1	White	0	0	1
2	Red	0	1	1
3	Yellow	.17	1	1
4	Green	.33	1	1
5	Cyan	.50	1	1
6	Blue	.67	1	1
7	Magenta	.83	1	1
8	Black	0	0	0
9	Olive Green	.15	.75	.80
10	Aqua	.44	.75	.68
11	Royal Blue	.75	.36	.64
12	Maroon	.95	.65	.78
13	Brick Red	.04	.80	1
14	Orange	.08	1	1
15	Brown	.08	.70	.85

Requires GRAPHX

Requires GRAPHX

Requires GRAPHX

SET TIME

This statement resets the time-of-day given by the real-time clock.

```
SET TIME 0
SET TIME Hours*3600+Minutes*60
```

SET TIMEDATE

This statement resets the absolute seconds (time and day) given by the real-time clock.

```
SET TIMEDATE TIMEDATE+86400
SET TIMEDATE Strange_number
```

SGN

This function returns 1 if the argument is positive, 0 if it equals zero, and -1 if it is negative.

```
Root=SGN(X)*SQR(ABS(X))
Z=2*PI*SGN(Y)
```

SHIFT

This function returns an integer which equals the value obtained by shifting the 16-bit binary representation of the argument the number of bit positions specified, without wrap-around. Also see ROTATE.

```
New_word=SHIFT(Old_word,-2)
Mask=SHIFT(1,Position)
```

SHOW

Requires GRAPH

This statement is used to define an isotropic current unit-of-measure for graphics operations.

```
SHOW -5,5,0,100
SHOW Left,Right,Bottom,Top
```

SIGNAL

Requires IO

This statement generates a software interrupt. See ON SIGNAL.

```
SIGNAL Selector
SIGNAL 3
```

SIN

This function returns the sine of the angle represented by the argument.

```
Sine=SIN(Angle)
PRINT "Sine of";Theta;"=";SIN(Theta)
```

SIZE

Requires MAT

This function returns the number of elements in a dimension of an array.

```
Total_words=SIZE(Words$,1)
Upperbound(2)=BASE(A1,2)+SIZE(A1,2)-1
```

SORT

See MAT SORT.

SPANISH

See LEXICAL ORDER IS.

SPOLL

Requires IO

This function returns an integer containing the serial poll response from the addressed device.

```
Stat=SPOLL(707)
IF SPOLL(@Device) THEN Respond
```

SQR

This function returns the square root of the argument.

```
AMPS=SQR(Watts/Dhms)
PRINT "Square root of";X;"=";SQR(X)
```

STANDARD

See LEXICAL ORDER IS.

STATUS

This statement returns the contents of I/O path or interface status registers.

```
STATUS 1;XPos,YPos
STATUS 1sc,Register;Val1,Val2,Val3
STATUS 1,g;ScreenWidth
STATUS @File,5;Record
```

STEP

See FOR...NEXT.

STOP

This statement terminates execution of the program.

STOP

IF Done THEN STOP

STORE

This statement creates a file and stores either an internal form of the BASIC program or typing-aid definitions into the file.

STORE Name\$&Msus\$

STORE "TEMP:INTERNAL,4,1"

Requires KBD

STORE KEY "AIDS"

STORE SYSTEM

This statement stores the entire BASIC operating system currently in memory including any BINs that are loaded.

STORE SYSTEM "SYSTEM.B1:INTERNAL"

STORE SYSTEM "BACKUP"

SUB

This is the first statement in a SUB subprogram and specifies the subprogram's formal parameters. SUB subprograms must follow the main program's END statement and must be terminated by a SUBEND statement. See CALL.

SUB Parse(String\$)

SUB Process

SUB Transform(@Printer,INTEGER Array(*),
OPTIONAL Text\$)

SUB Extract(Buff\$ BUFFER,Pointer)

SUBEND

The last statement of a SUB subprogram. This returns control to the calling context. See also SUB.

SUBEND

SUBEXIT

This statement may be used to return from a SUB subprogram at some point other than the SUBEND statement.

SUBEXIT
IF Done THEN SUBEXIT

SUM

Requires MAT

This function returns the sum of all the elements in a numeric array.

Total=SUM(Array)
PRINT SUM(Squares)

SUSPEND INTERACTIVE

This statement deactivates the program control keys (such as STEP and PAUSE).

SUSPEND INTERACTIVE
SUSPEND INTERACTIVE,RESET

SWEDISH

See LEXICAL ORDER IS.

SYMBOL

Requires GRAPHX

This statement allows labelling with user-defined symbols.

SYMBOL My_char(*)
SYMBOL Logo(*),FILL,EDGE

SYSBOOT

This command returns control to the BOOT ROM to restart the system selection and configuration process.

SYSBOOT

SYSTEM PRIORITY

This statement sets the system priority to a specified level.

SYSTEM PRIORITY Level
SYSTEM PRIORITY 15

SYSTEM\$

This function returns a string containing system status and configuration information.

Memory=VAL(SYSTEM\$("AVAILABLE MEMORY"))
IF SYSTEM\$("TRIG MODE")="RAD" THEN Radian

The following requests are allowed.

AVAILABLE MEMORY
CRT ID
DUMP DEVICE IS
KBD LINE
MASS MEMORY
MASS STORAGE IS
MSI
PRINTALL IS
PRINTER IS
SERIAL NUMBER
SYSTEM ID
SYSTEM PRIORITY
TRIG MODE
VERSION: BASIC or <binary name>

Requires GRAPH

GRAPHICS INPUT IS
PLOTTER IS

Requires LEX

KEYBOARD LANGUAGE
LEXICAL ORDER IS

T

TAB

See PRINT and DISP.

TABXY

See PRINT.

TALK

See SEND.

TAN

This function returns the tangent of the angle represented by the argument.

```
Tangent=TAN(Angle)
PRINT "Tangent of";Z;"=";TAN(Z)
```

TIME

Requires CLOCK

This function converts a formatted time-of-day string into a numeric value of seconds past midnight.

```
Seconds=TIME(T$)
SET TIME TIME("8:37:30")
```

TIMES

Requires CLOCK

This function converts the number of seconds past midnight into a string representing the formatted time of day (HH:MM:SS).

```
PRINT "It is ";TIME$(TIMEDATE)
IF VAL(TIME$(T1))>17 THEN Overtime
```

TIMEDATE

This function returns the current value of the real-time clock.

```
Elapsed=TIMEDATE-T0
DISP TIMEDATE MOD 86400
```

TIMEOUT

See OFF TIMEOUT and ON TIMEOUT.

TRACE ALL

Requires PDEV

This statement allows tracing program flow and variable assignments during program execution. Trace output is sent to the system message line and (if PRINTALL is on) to the PRINTALL device.

```
TRACE ALL Sort
TRACE ALL Label1,Label2
TRACE ALL 1500,2450
```

TRACE OFF

Requires PDEV

This statement turns off all tracing activity.

```
TRACE OFF
```

TRACE PAUSE

Requires PDEV

This statement causes program execution to pause before executing the specified line, and displays the next line to be executed on the CRT. Tracing slows program execution.

```
TRACE PAUSE
TRACE PAUSE 530
TRACE PAUSE Loop_end
```

TRACK

Requires GRAPHX

This statement enables or disables tracking of the current locator position on the current display device. See GRAPHICS INPUT IS and PLOTTER IS.

```
TRACK Display IS ON
TRACK 709 IS OFF
```

TRANSFER

Requires TRANS

This statement initiates unformatted I/O transfers, which can take place concurrently with continued program execution. Every TRANSFER needs a buffer as either its source or its destination (but not both).

```
TRANSFER @Device TO @Buff
TRANSFER @Buff TO @File:CONT
TRANSFER @Source TO @Buff;DELIM "/",END
TRANSFER @F TO @B;RECORDS 12,EOR(COUNT B)
```

TRIGGER

Requires IO

This statement sends a trigger message to a selected device, or to all devices addressed to listen, on the HP-IB.

```
TRIGGER 712
TRIGGER Device
TRIGGER @Hr1b
```

TRIM\$

This function returns a string formed by stripping all leading and trailing blanks from the argument.

```
Left$=TRIM$("      center      ")
Clean$=TRIM$(User_input$)
```

TRN

See MAT.

U

UNL

See SEND.

UNLOCK

Requires SRM

This statement is used to remove exclusive access to a remote file which was placed by the LOCK statement.

```
UNLOCK @File
IF Done THEN UNLOCK @File
```

UNT

See SEND.

UNTIL

See REPEAT...UNTIL.

UPC\$

This function returns a string formed by replacing any lowercase characters with the corresponding uppercase characters.

```
Capital$=UPC$(Mixed$)
IF UPC$(Yes$)="Y" THEN True_test
```

USING

See DISP, ENTER, LABEL, OUTPUT, and PRINT.

V

VAL

This function converts a string expression into a numeric value.

```
Day=VAL(Date$)
IF VAL(Response$)<0 THEN Negative
```

VAL\$

This function returns a string representation of the value of the argument. The returned string is in the default print format, except that the first character is not a blank for positive numbers. No trailing blanks are generated.

```
PRINT Esc$;VAL$(Cursor-1)
Special$=Text$&VAL$(Number)
```

VIEWPORT

Requires GRAPH

This statement defines an area (in GDUs) onto which WINDOW and SHOW statements are mapped. It also sets the soft clip limits to the boundaries it defines.

```
VIEWPORT 0,35,50,80
VIEWPORT Left,Right,Bottom,Top
```

W

WAIT

This statement will cause the computer to wait approximately the number of seconds specified before executing the next statement.

```
WAIT 3
WAIT Seconds/2
```

WAIT FOR EOR

Requires TRANS

This statement waits until an end-of-record event occurs during a TRANSFER on the specified I/O path.

```
WAIT FOR EOR @File
WAIT FOR EOR @Device
```

WAIT FOR EOT

Requires TRANS

This statement waits until the TRANSFER completes on the specified I/O path.

```
WAIT FOR EOT @File
WAIT FOR EOT @Device
```

WHERE

Requires GRAPHX

This statement returns the current logical position of the pen.

```
WHERE X_Pos,Y_Pos
WHERE X,Y,Status$
```

WHILE

This construct defines a loop which is repeated until the expression in the WHILE statement evaluates to false (zero).

```
330 WHILE Size>=Minimum
340   GOSUB Process
350   Size=Size/Scaling
360 END WHILE
```

WIDTH

See PRINTALL IS and PRINTER IS.

WINDOW

Requires GRAPH

This statement is used to define an anisotropic current unit-of-measure for graphics operations.

```
WINDOW -5,5,0,100
WINDOW Left,Right,Bottom,Top
```

WORD

See ASSIGN.

WRITEIO

This statement writes an integer representation of the register-data to the specified hardware register on the specified interface.

```
WRITEIO 12,0;Set_Pctl
WRITEIO Isc,Register;Res_data
```

X

XREF

Requires XREF

This command produces a cross-referenced listing of the identifiers in a program or subprogram. The final optional parameter may be any one of the following:

CM	Common Block Names
ID	I/O Path Names
LL	Line Labels
LN	Line Numbers
NF	Numeric Functions
NV	Numeric Variables
SB	SUB Subprograms
SF	String Functions
SV	String Variables
UN	Unused Entries

```
XREF
XREF #PRT
XREF #701;FNUser$
XREF MAIN:NV
```

I/O Path Status and Control Registers

Example Statements

```
STATUS @Path,Register;Variable  
CONTROL @Path,Register;Value
```

For All I/O Path Names:

Status Register 0

Returned Value	Meaning
0	Invalid I/O path name
1	I/O path name assigned to a device
2	I/O path name assigned to a data file
3	I/O path name assigned to a buffer

I/O Path Names Assigned to a Device:

Status Register 1 Interface select code
Status Register 2 Number of devices
Status Register 3 1st device selector

If assigned to more than one device, the other device selectors are available starting in Status Register 4.

I/O Path Names Assigned to an ASCII File:

Status Register 1 File type = 3
Status Register 2 Device selector of mass storage device
Status Register 3 Number of records
Status Register 4 Bytes per record = 256
Status Register 5 Current record
Status Register 6 Current byte within record

I/O Path Names Assigned to a BDAT File:

Status Register 1 File type = 2
Status Register 2 Device selector of mass storage device
Status Register 3 Number of defined records
Status Register 4 Defined record length

I/O Path Status and Control Registers (cont.)

Status Register 5	Current record
Control Register 5	Set current record
Status Register 6	Current byte within record
Control Register 6	Set current byte within record
Status Register 7	EOF record
Control Register 7	Set EOF record
Status Register 8	Byte within EOF record
Control Register 8	Set byte within EOF record

I/O Path Names Assigned to a Buffer:

Status Register 1	Buffer type (1 = named, 2 = unnamed)
Status Register 2	Buffer size in bytes
Status Register 3	Current fill pointer
Control Register 3	Set fill pointer
Status Register 4	Current number of bytes in buffer
Control Register 4	Set number of bytes
Status Register 5	Current empty pointer
Control Register 5	Set empty pointer
Status Register 6	Interface select code of inbound TRANSFER
Status Register 7	Interface select code of outbound TRANSFER
Status Register 8	If non-zero, inbound TRANSFER is continuous
Control Register 8	Cancel continuous mode inbound TRANSFER if zero
Status Register 9	If non-zero, outbound TRANSFER is continuous
Control Register 9	Cancel continuous mode outbound TRANSFER if zero (see next page)
Status 10, 11	Total number of bytes transferred by last inbound TRANSFER
Status Register 12	Total number of bytes transferred by last inbound TRANSFER
Status Register 13	Total number of bytes transferred by last outbound TRANSFER

Inbound Termination		Least Significant Bit	
Bit 7	Bit 6	Bit 5	Bit 4
0	TRANSFER Active	TRANSFER Aborted	TRANSFER Error
Value = 128	Value = 64	Value = 32	Value = 16
Bit 3	Bit 2	Bit 1	Bit 0
Device Termination	Byte Count	Record Count	Match Character
Value = 8	Value = 4	Value = 2	Value = 1

Status Register 10
Most Significant Bit

Outbound Termination		Least Significant Bit	
Bit 7	Bit 6	Bit 5	Bit 4
0	TRANSFER Active	TRANSFER Aborted	TRANSFER Error
Value = 128	Value = 64	Value = 32	Value = 16
Bit 3	Bit 2	Bit 1	Bit 0
Device Termination	Byte Count	Record Count	0
Value = 8	Value = 4	Value = 2	Value = 1

Status Register 11
Most Significant Bit

CRT Status and Control Registers

Example Statements

```
STATUS 1,Register;Variable
CONTROL 1,Register;Value
```

Status Register 0 Current print position (column)
Control Register 0 Set print position (column)

Status Register 1 Current print position (line)
Control Register 1 Set print position (line)

Status Register 2 Insert-character mode
Control Register 2 Set insert character mode if non-0

Status Register 3 Number of lines "above screen"
Control Register 3 Undefined

Status Register 4 Display functions mode
Control Register 4 Set display functions mode if non-0

Status Register 5 Return default alpha color
Control Register 5 Set default alpha color:

For Alpha Displays:

Value	Result	Value	Result
< 128	Error	140	Cyan
128-135	Ignored	141	Blue
136	White	142	Magenta
137	Red	143	Black
138	Yellow	144-159	Ignored
139	Green	> 159	Error

For Bit-mapped displays: Values 0 thru 255 which correspond to the graphics pens.

For multi-plane bit-mapped displays, the graphics pen to be used for alpha.

CONTROL CRT ,5 ; n sets the values of the CRT registers 15, 16, and 17, but not vice-versa.

Status Register 6 ALPHA ON flag
Control Register 6 Undefined

Status Register 7 GRAPHICS ON flag
Control Register 7 Undefined

Status Register 8 Display line position (column)
Control Register 8 Set display line position (column)

Status Register 9 Screenwidth (number of characters)
Control Register 9 Undefined

Status Register 10 Cursor-enable flag
Control Register 10 Cursor-enable:
 0 = cursor invisible
 non-0 = cursor visible

Status Register 11 CRT character mapping flag
Control Register 11 Disable CRT character mapping if non-0

Status Register 12 Key labels display mode
Control Register 12 Set key labels display mode:
 0 = typing-aid key labels displayed unless program is in the RUN state
 1 = key labels always off
 2 = key labels displayed at all times

Status Register 13 CRT height
Control Register 13 CRT height; number of lines in alpha display must be greater than 8.

Status Register 14 Display replacement
Control Register 14 Display replacement:

0 - 0
 1 - source AND old
 2 - source AND NOT old
 3 - source; default
 4 - NOT source AND old
 5 - old
 6 - source EXOR old
 7 - source OR old
 8 - source NOR old
 9 - source EXNOR old
 10 - NOT old
 11 - source OR NOT old
 12 - NOT source
 13 - NOT source OR old
 14 - source NAND old
 15 - 1

Status Register 15 Return the value set (or the default) for the color in the PRINT/DISP area.

Control Register 15 Set PRINT/DISP color. Similar to CRT control register 5 but specific to CRT PRINT/DISP areas.

Status Register 16 Return the value set (or the default) for the softkey label color.

Control Register 16 Set key labels color. Does not affect the areas covered by CRT registers 15 and 17.

Status Register 17 Return the value set (or the default) for the color keyboard entry line, runlight, system message line, annunciators, and edit screen.

Control Register 17 Set color of the keyboard entry line, runlight, system message line, annunciators, and edit screen. Does not affect the areas covered by CRT control registers 15 and 16.

Status Register 18 Read the alpha write-enable mask.

Control Register 18 Set alpha write-enable mask to a bit pattern.

Status Register 19 Return number of planes in alpha CRT.

Control Register 19 Undefined.

Status Register 20 Read the alpha display-enable mask.

Control Register 20 Set alpha display-enable to a bit pattern.

Status Register 21 Return compatibility mode(0 or 1).

Control Register 21 Switch between the CRT compatibility mode (value $\neq 0$) and the native bit-mapped mode (value = 0).

Keyboard Status and Control Registers

Example Statements

```
STATUS 2,Register:Variable
CONTROL 2,Register:Value
```

Status Register 0	CAPS LOCK flag
Control Register 0	Set CAPS LOCK if non-0
Status Register 1	PRINTALL flag
Control Register 1	Set PRINTALL if non-0
Status Register 2	Function key menu. 0 = System menu 1-3 = User menu 1 thru 3
Control Register 2	Set function key menu
Status Register 3	Undefined
Control Register 3	Set auto-repeat interval. If 1 thru 255, repeat rate in milliseconds is 10 times this value. 256 = turn off auto-repeat. (Default at power-on or SCRATCH A is 80 ms.)
Status Register 4	Undefined
Control Register 4	Set delay before auto-repeat. If 1 thru 256, delay in milliseconds is 10 times this value. (Default at power-on or SCRATCH A is 700 ms.)
Status Register 5	KBD\$ buffer overflow register. 1 = overflow. Register is reset when read.
Control Register 5	Undefined
Status Register 6	Typing aid expansion overflow register. 1 = overflow. Register is reset when read.
Control Register 6	Undefined
Status Register 7	See table on next page.
Control Register 7	See table on next page.

109

Pseudo Select Code 32 Status and Control Registers

Status Register 0	Parity checking; 0 = off, 1 = on.
Control Register 0	Sets parity checking; 0 = off, 1 = on.
Status Register 1	Cache; 0 = off, 1 = on.
Control Register 1	Sets cache; 0 = off, 1 = on.
Status Register 2	Floating point card/68881 floating point coprocessor; 0 = off, 1 = on.
Control Register 2	Sets floating point card/68881 floating point coprocessor; 0 = off, 1 = on.

Second Byte of Non-ASCII Key Codes

Non-ASCII keypresses can be simulated by outputting a 2-byte sequence to the keyboard. The decimal value of the first byte is 255. The interpretation of the second byte is shown in this table.

Character	Value	Key
space		1
!	33	STOP
"		1
#	35	CLR LN
\$	36	ANY CHAR
%	37	CLR - END
&	38	Select
'	39	Prev
(40	SHIFT - TAB
)	41	TAB
*	42	INS LN
+	43	INS CHR
,	44	Next
-	45	DEL CHR

Q		1
R	82	RUN
S	83	STEP
T	84	SHIFT - ↓

¹ These characters cannot be generated by pressing the CTRL key and a non-ASCII key. If one of these characters follows CHR\$(255) in an output to the keyboard, an error is reported
(Error 131 Bad non-alphanumeric keycode.).

² System and user refer to the softkey menu which is currently active.

Second Byte of Non-ASCII Key Codes (cont.)

Character	Value	Key

Error Messages

- | | | | | |
|----|--|-------------------|----|--|
| 1 | Configuration error | | 28 | LOG or LGT of a non-positive number. |
| | or | | 29 | Illegal floating point number. |
| | Missing option <BIN number> | (without ERR BIN) | 30 | SQR of a negative number. |
| | or | | 31 | Division (or MOD) by zero. |
| | Missing option <BIN name> | (with ERR BIN) | 32 | String does not represent a valid number. |
| 2 | Memory overflow. | | 33 | Improper argument for NUM or RPT\$. |
| 3 | Line not found in current context. | | 34 | Referenced line not an IMAGE statement. |
| 4 | Improper RETURN. | | 35 | Improper image. |
| 5 | Improper context terminator. | | 36 | Out of data in READ. |
| 6 | Improper FOR...NEXT matching. | | 38 | TAB or TABXY not allowed here. |
| 7 | Undefined function or subprogram. | | 40 | Improper REN command. |
| 8 | Improper parameter matching. | | 41 | First line number greater than second line number. |
| 9 | Improper number of parameters. | | 43 | Matrix must be square. |
| 10 | String type required. | | 44 | Result matrix cannot be an operand. |
| 11 | Numeric type required. | | 46 | No binary for STORE BIN or no program for SAVE. |
| 12 | Attempt to redeclare variable. | | 47 | Improper COM declaration. |
| 13 | Array dimensions not specified. | | 49 | Branch destination not found. |
| 14 | OPTION BASE not allowed here. | | 51 | File not currently assigned. |
| 15 | Invalid bounds. | | 52 | Improper mass storage unit specifier. |
| 16 | Improper dimensions. | | 53 | Improper file name. |
| 17 | Subscript out of range. | | 54 | Duplicate file name. |
| 18 | String overflow or substring error. | | 55 | Directory overflow. |
| 19 | Improper value or out of range. | | 56 | File name is undefined. |
| 20 | INTEGER overflow. | | 58 | Improper file type. |
| 22 | REAL overflow. | | 59 | End of file found. |
| 24 | Trigonometric argument too large. | | 60 | End of record found in random mode. |
| 25 | Absolute value of ASN or ACS argument is greater than 1. | | 62 | Protect code violation. |
| 26 | Zero to negative power. | | 64 | Mass storage media overflow. |
| 27 | Negative base to non-integer power. | | | |

- 65 Incorrect data type for graphics operation.
- 66 INITIALIZE failed.
- 67 Improper mass storage parameter.
- 68 Syntax error occurred during GET.
- 72 Disc controller not found or improper address.
- 73 Improper device type in mass storage unit specifier.
- 76 Incorrect unit code in msus.
- 77 Attempt to purge an open file.
- 78 Improper mass storage volume label.
- 79 File open on target device. *4778 line #*
- 80 Media changed or not in drive.
- 81 Mass storage hardware failure (or disc not turning).
- 82 Mass storage unit not present.
- 83 Write protected.
- 84 Record not found.
- 85 Media not initialized.
- 87 Record address error.
- 88 Read data error.
- 89 Checkread error.
- 90 Mass storage system error.
- 93 Incorrect volume code in MSUS.
- 100 Numeric image specifier for string item.
- 101 String image specifier for numeric item.
- 102 Numeric field specifier is too large.
- 103 Item has no corresponding image specifier.
- 105 Numeric field specifier is too small.
- 106 Exponent field specifier is too small.
- 107 Sign specifier missing from image.

- 117 Too many nested structures.
- 118 Too many structures in context.
- 120 Not allowed while program running.
- 121 Line not in main program.
- 122 Program is not continuable.
- 126 Quote mark in unquoted string.
- 127 Improper sequence of KNOB statements.
- 128 Line too long during GET.
- 131 Improper non-ASCII keycode.
- 132 Keycode buffer overflow.
- 133 DELSUB of non-existent or busy subprogram.
- 134 Improper SCRATCH statement.
- 135 READIO or WRITEIO to non-existent memory location.
- 136 REAL underflow.
- 140 Too many symbols in the program.
- 141 Variable cannot be allocated.
- 142 Variable not allocated.
- 143 Reference to missing OPTIONAL parameter.
- 145 May not build COM at this time.
- 146 Duplicate label in context.
- 150 Improper interface select code or device selector.
- 152 Parity error.
- 153 Insufficient data for ENTER.
- 154 String greater than 32 767 bytes in ENTER.
- 155 Improper interface register number.
- 156 Improper expression type in list.
- 157 No ENTER terminator found.

- 158 Improper image specifier.
- 159 Numeric data not received.
- 160 Too many digits in number.
- 163 Interface not present.
- 164 Illegal ASSIGN of WORD attribute.
- 165 Image specifier greater than dimensioned string length.
- 167 Interface status error.
- 168 I/O timeout.
- 170 I/O operation not allowed.
- 171 Illegal I/O addressing sequence.
- 172 Peripheral (PSTS) error. I/O device failure.
- 173 Active or system controller required.
- 174 Nested I/O prohibited.
- 177 Unidentified I/O path name.
- 178 Trailing punctuation in ENTER.
- 301 Cannot do while connected.
- 303 Cannot do while trace active.
- 304 Too many characters without a terminator.
- 306 Interface card failure.
- 308 Illegal character in data.
- 310 Not connected.
- 313 USART receive buffer overflow.
- 314 Receive buffer overflow.
- 315 Missing data transmit clock.
- 316 CTS false too long.
- 317 Lost carrier disconnect. DSR and/or DCD inactive too long.

- 318 No activity disconnect.
- 319 Connection not established.
- 324 Card trace buffer overflow.
- 325 Illegal data bits/parity combination.
- 326 Register address out of range.
- 327 Register value out of range.
- 328 USART transmit underrun.
- 330 User-defined LEXICAL ORDER table size exceeds array size.
- 331 MAT REORDER vector has repeated subscripts.
- 332 Non-existent dimension given for MAT REORDER.
- 333 Improper subscript in MAT REORDER vector.
- 334 Vector size not equal to number of elements for MAT REORDER.
- 335 Pointer for MAT REORDER is not a vector.
- 337 Substring key out of range.
- 338 Key subscript out of range.
- 340 LEXICAL ORDER mode table is too long.
- 341 Improper LEXICAL ORDER mode indicator.
- 342 LEXICAL ORDER mode table is not an INTEGER vector.
- 343 LEXICAL ORDER mode pointer out of range.
- 344 LEXICAL ORDER 1-for-2 list is wrong size.
- 345 CASE expression type mismatch.
- 346 INDENT parameter out of range.
- 347 Structures improperly matched.
- 349 CSUB has been modified.
- 353 Data link failure.

369-399 Run-Time Pascal error during a CSUB. Subtract 400 from BASIC error number and refer to the *Pascal Workstation System* manual.

401 Bad system-function argument.

403 COPYLINES or MOVE LINES failed; program modification incomplete.

427 Priority may not be lowered.

450 Volume not found (SRM).

451 Volume labels do not match (SRM).

453 File in use (SRM).

454 Directory formats do not match (SRM).

455 Possibly corrupt file (SRM).

456 Unsupported directory operation (SRM).

457 Passwords not supported (SRM).

458 Unsupported directory format (SRM).

459 Specified file is not a directory (SRM).

460 Directory is not empty (SRM).

461 Duplicate passwords not allowed.

462 Invalid password (SRM).

465 Invalid rename across volumes (SRM).

471 TRANSFER not supported by the interface.

481 File locked or opened exclusively (SRM).

482 Cannot move a directory with a RENAME operation (SRM).

483 System down (SRM).

484 Password not found (SRM).

485 Invalid volume copy (SRM).

488 DMA hardware required.

511 Result array for MAT INV must be REAL.

600 BYTE/WORD attribute cannot be modified.

601 Improper CONVERT lifetime.

602 Improper BUFFER lifetime.

603 Variable was not declared as a BUFFER.

604 Improper source or destination for TRANSFER.

605 BDAT file type required.

606 Improper TRANSFER parameters.

607 Inconsistent attributes.

609 IVAL or DVAL result too large.

612 BUFFER pointers in use.

700 Improper plotter specifier.

702 CRT graphics hardware missing.

704 Upper bound not greater than lower bound. (P2≤P1 or VIEWPORT/CLIP conflict)

705 VIEWPORT or CLIP beyond hard clip limits.

708 Device not initialized.

713 Request not supported on specified graphics device.

733 GESC APE operation not recognized.

900 Undefined typing-aid key.

901 Typing-aid memory overflow.

902 Must delete entire context.

903 No room to renumber.

904 Attempt to find a null string.

905 CHANGE would produce too long a line.

906 SUB or DEF FN not allowed here.

909 May not replace SUB or DEF FN.

910 Identifier not found in this context.

911 Improper I/O list.

- 920 Numeric constant not allowed.
- 921 Numeric identifier not allowed.
- 922 Numeric array element not allowed.
- 923 Numeric expression not allowed.
- 924 Quoted string not allowed.
- 925 String identifier not allowed.
- 926 String array element not allowed.
- 927 Substring not allowed.
- 928 String expression not allowed.
- 929 I/O path name not allowed.
- 930 Numeric array not allowed.
- 931 String array not allowed.
- 932 Excess sort keys specified.
- 935 Identifier is too long: 15 characters max.
- 936 Unrecognized character.
- 937 Invalid OPTION BASE.
- 939 OPTIONAL appears twice.
- 940 Duplicate formal parameter name.
- 942 Invalid I/O path name.
- 943 Invalid function name.
- 946 Dimensions are inconsistent.
- 947 Invalid array bounds.
- 948 Multiple assignment prohibited.
- 949 This symbol not allowed here.
- 950 Must be a positive integer.
- 951 Incomplete statement.
- 961 CASE expression type mismatch.

- 962 Programmable only: cannot be executed from the keyboard.
- 963 Command only: cannot be stored as a program line.
- 977 Statement is too complex.
- 980 Too many symbols in this context.
- 982 Too many subscripts: 6 dimensions max.
- 983 Wrong type or number of parameters.
- 985 Invalid quoted string.
- 987 Invalid line number: only integers 1 thru 32 766 allowed.
